

GUIDE · NETSUITE + SALESFORCE

Integration Shouldn't Take Months

Real-time Salesforce-NetSuite sync without the delay, cost or complexity of legacy approaches.

You bought NetSuite for its financial power and your team runs revenue on Salesforce — but if the two aren't connected, everyone works with half the picture. Breadwinner links them in real time, delivering the visibility, automation and speed your teams need. No long dev cycles, no disconnected data, no guesswork.

What you get

Live NetSuite data inside Salesforce — payments, invoices, credit limits and balances — plus invoice creation from Salesforce, in-context inventory checks and rapid deployment.

Deal-to-invoice in record time

The moment a deal hits Closed-Won, Breadwinner triggers a NetSuite invoice — eliminating finance waits and duplicate entry.

True visibility, no back-and-forth

Sales and CS see live payment status in Salesforce instead of asking finance “has this been paid?”

Real-time data for better decisions

Live NetSuite data supports credit-risk review, chasing overdue accounts and revenue forecasting — with full automation or an optional guided invoice wizard.

“We built automation because that's what teams asked for. But when they try the guided wizard, most realize it's the perfect balance of speed and oversight.”
