

Built with AI. Finished by engineers.

Four fixed-price offerings that take a 20–90% built Salesforce app — Apex, LWC, Flows — to documented, tested, and deployable.

01

5–7 business days

Finish Audit

*AI Code Audit & Triage***\$4,500 fixed**

50% start / 50% delivery · credited if Sprint or AppExchange booked in 30 days

- 0–100 Finish Score with dimension detail — the number your CFO repeats, and the baseline every later release is measured against
- Code Analyzer findings by severity + AppExchange rule-selector pass against Security Review criteria on day one
- Apex coverage baseline; CRUD/FLS, sharing, and secrets mapped to Salesforce's Top-20 review failures
- Trigger / Flow / Apex duplication map, ranked by business impact — 45-minute architect walkthrough
- Keep / refactor / rebuild verdict and a fixed-price quote for Sprint or AppExchange

02

4–8 weeks

Finish Sprint

*Completion & Hardening***\$25,000–\$50,000 fixed**

\$15,000 floor (small scope) · \$60,000–\$100,000 (complex)

- Refactor AI-generated Apex and LWC: one trigger per object, consolidated Flows, bulkification, governor-limit fixes
- Durable error logging; CRUD/FLS and sharing closed; secrets moved to Named Credentials
- Apex tests to 85%+ with real assertions — not coverage padding — plus automated browser tests
- The documentation the AI never wrote; source control, scratch orgs, and CI/CD stood up
- UAT, production deploy, and knowledge transfer. Finish Score re-scored at delivery.

03

8–14 weeks

Finish for AppExchange

*Prep & First Release***\$45,000–\$90,000 fixed**

Full first release · co-build on a partial app from \$25,000 · \$9,500 for review/submit

- Multi-tenant architecture: namespace, packaging boundaries, no org-specific assumptions, upgrade path
- Build or co-build (Dev Hub required) in VS Code + Claude Code to Well-Architected patterns
- Second-generation managed package with install/upgrade testing in clean scratch and trial orgs
- License Management App wired, with license enforcement in code and a trial-org template
- Security Review package (Checkmarx, DAST, false-positive write-ups) + one resubmission and listing support

04

Monthly, 90-day minimum

Finish Watch

*Hypercare Retainer***\$2,500 / \$5,000 per month**

Sprint tier / AppExchange tier · 90-day minimum

- Defect fixes after go-live so the shipped app does not become next quarter's incident queue
- Coverage and Code Analyzer regression check after repairs and on every release
- Up to 8 triage hours included each month; unused hours expire
- AppExchange tier adds subscriber-defect triage and patch-version releases
- Monthly report trended against the original Finish Score
