

HR Data Integration for User and Team Management

Large organisations need to keep their user base in sync with their HR system to manage onboarding, offboarding, and changes in roles or team structures and hierarchies. By automating this process, Salesforce user profiles remain up-to-date, ensuring proper access control and team reporting alignment.

Through its mapping capabilities, CONVAYR enables control of user access, permissions and hierarchy in Salesforce - automating the creation and deactivation of users along with application of permission sets and group assignment. CONVAYR can keep your organisational structure up to date automatically as titles and reporting lines change.

Keeping user data in sync with HR data ensures better security, reduces manual admin work, and aligns Salesforce workflows and reporting with the organisation's actual structure.
