

IGNA Forms - Native Form Builder

Release Notes

Salesforce-Native · No-Code · Metadata-Driven

Version History

All released versions of the IGNA Forms - Native Form Builder managed package (Namespace: IGNA_Forms).

Version	Release Date	Status	Summary
0.4.0	June 2026	Released	This release introduces IGNA Forms, a native form builder with drag-and-drop functionality, conditional logic, dynamic styling, and a communication module.

Version 0.4.0 - Release (May 2026)

This release introduces permission set management, automated post-install configuration, and the pre-built template library.

New Features

- **Native Form Builder:** Introduced IGNA Forms, a native form builder application for creating and managing forms within the platform.
- **Drag-and-Drop Form Creation:** Users can add, arrange, and configure form fields through an intuitive drag-and-drop interface.
- **Dynamic Form Builder:** Supports the creation of configurable and reusable forms based on different business requirements.
- **Conditional Logic Builder:** Enables users to show, hide, or control form fields based on defined conditions and user responses.
- **Dynamic Styling:** Allows users to customize the appearance, layout, and styling of forms.
- **Communication Module:** Provides communication-related functionality for managing messages, notifications, and associated actions.
