Flow Map

Data Map

Get Element

Retrieves the value for the Key in the Map.

Put Element

Value is put into the Map with the Key. If the Key already exists in the Map, the Value is replaced.

Delete Element

Key and the associated value are removed from the Map.

SObject Map

Create SObject Map

Object For “Records” (Input)

The SObject type the map will hold records for.

Key Field

The SObject field for the SObject type entered into Object For “Records” (Input) to use as the key field in the map. This is the field that will be used to retrieve records from the map.

Records

A collection of SObject records, of the SObject type entered into Object For “Records” (Input).

Get SObject Element

Retrieves the record(s) for the Key in the Map.

Put SObject Element

A record or list of records is put into the Map with the Key. If the Key already exists in the Map, the Value is replaced.

Delete SObject Element

Key and the associated record(s) are removed from the Map.

Time Field

Input Options

Default Time

The time the field defaults to, in HH:MM or HH:MM:SS format depending on if the Display Seconds is selected. To default to the current time, enter “Now”.

Display Seconds

A true/false value to determine if the time should display just hours and minutes, or hours, minutes and seconds. By default, only hours and minutes display.

Additional Considerations
