AWS Connect

Store Salesforce files in Amazon S3. Manage them without leaving Salesforce.

AWS Connect lets you move your Salesforce files into Amazon S3 while keeping the management and control within your org. Upload, preview, access, organize, delete, sync, and restore files through a Salesforce interface while Amazon S3 serves as the scalable storage layer.

71% Lower Storage Costs
Reduce Salesforce file storage spend

Manage Files in Salesforce
Access and organize S3 files without switching systems

Migration & Recovery Ready
Move, restore, and re-link files when needed

Millions of Files at Scale
Handle growth without slowing Salesforce

Why Businesses choose AWS Connect

- **Reduce Salesforce storage costs.** Store files in S3 at a fraction of Salesforce's cost. Maintain predictable, manageable storage expenses regardless of data growth.
- **Restore files anytime.** Files sync bidirectionally between S3 and Salesforce. Restore any file when needed using sync utilities and metadata mappings.
- **Process files at scale.** Batch Apex processes large files asynchronously in chunks. Move thousands of files without slowing Salesforce or locking records.
- **Preserve structure during migration.** Migrate files in bulk to new orgs. Preserves folder structure and automatically reattaches each file to its correct record.

What it does

Files, Folders & Access

- **Native Lightning interface** to upload, preview, rename, and move files, on any standard or custom object
- Files are **offloaded to Amazon S3** and the Salesforce record keep linked to them
- Access files through **signed, time-bound links** that auto-expire, keeping your files secure
- **Folder paths** generated in S3 from configurable metadata rules

Scale, Migrate & Insight

- **Bulk archival**, backups, and mass data migrations without any timeout issues or locked record status
- **Migration of legacy org** that preserves the folder hierarchy and links files to their respective records
- **Bidirectional sync**, and every file can be restored from S3 back into Salesforce
- **Amazon AI and LLM models** can read stored documents and extract structured data
