

Release Notes

For product information go to <https://tigerfacesystems.com/products>

Version 2.10

Add Apex Action so customers can build automated flow processes that validate phone numbers.

Version 2.9

Add support for Lightning Web Security.

Version 2.7

This version contains the following enhancements and bug fixes:

1. Fixed bug where reference fields on Professional Edition list view configurations would cause batch job errors.
2. Removed support for Lead Status field for Professional Edition list view due to conflict with the Status validation field.
3. Removed parent phone fields for Professional Edition list views due to conflicts with Phone Number field.
4. Enhanced code to improve performance of the filter configuration UI.
5. Added logic so that if unexpected error is returned from API a null pointer exception will be avoided.
6. Improved logic in filter configuration UI when page is saved with open filter items.
7. Add logic to truncate error fields that are too long to fit inside record fields to avoid run times error messages.

Version 2.5

This version contains the initial release of Enterprise Edition. Original product features have been rebranded as Professional Edition.

Version 1.9

This version contains the following bug fixes:

1. Fixed bug in List View when multiple values were selected for a picklist field filter.
2. Added List View Filtered Batch Apex class. This class will process List View Display Configurations which have filters defined in order to reduce the number of records validated by the batch job.

Version 1.7

This version contains the following bug fixes:

1. Fixed bug where if an unsupported field, such as Geolocation, existed on Account, Contact, or Lead the utility app failed to render and displayed an error message.
2. Removed the parent field Id from the list of fields which can be displayed in a List View. In the previous release if the Id field was configured to be displayed it caused the List View to display an error message.

Version 1.6

This version contains the following enhancements:

1. API call retries have been added to reduce call out failures.
2. Added second batch job which can be used to retry any previously failed API calls.
3. Added the ability to filter on blank fields for List View display configurations.
4. Made error toast messages sticky to allow users time to read error messages.

Version 1.5

Initial product release
