

The problem

- Out of date, incomplete and inconsistent data across multiple instances and systems.
- Fragmented reporting leading to decision-making issues.
- High costs and delay from complex customisations.
- Time-consuming and error-prone manual data maintenance.
- Admins, developers and managers overwhelmed with maintenance tasks.

The solution

- Effortless integration and transformation through a simple UI - map source & target systems in minutes with nothing to code.
- Automate data syncs between Salesforce instances and systems.
- Secure and efficient data transfer.
- Eliminate custom integration and transformation.
- Spend time on innovation, not maintenance.
