

Connect your Experience Cloud users to the file workflows that keep your org running

Give Experience Cloud users secure access to Google Drive or SharePoint files, and a simple way to upload documents back into your org.

File Management for Salesforce Experience Cloud

Your internal teams have Drive Connect and Share Connect to manage files, automate folders, and keep documents organized across Salesforce. But what about your customers, partners, and community members on the other side of your Experience Cloud site?

Experience Connect is an extension for Drive Connect and Share Connect that brings file management capabilities to your Experience Cloud portals. Surface relevant Google Drive or SharePoint files to external users, accept document uploads directly through your site, and automatically route those uploads to the right folders using Salesforce Flow.

The Files component lets your internal team share linked Google Drive or

SharePoint files with Experience Cloud users directly from Salesforce, without requiring those users to have a Google Drive or SharePoint account. No duplicate sharing, no manual workarounds.

The Upload component gives external users a clean, reliable way to submit documents through your Experience Cloud site. With Salesforce Flow, those uploads are automatically routed to their designated Google Drive or SharePoint folders the moment they arrive, keeping files organized while cutting expensive Salesforce storage.

Experience Connect keeps your document workflows connected across every user in your org. Learn more at appiphony.com/experience-connect.

Experience Connect gives our wealth management customers exactly what they need, a clean branded client portal that connects directly to their Salesforce and SharePoint workflows.

Features

Share Files with Experience Cloud Users

Surface specific Google Drive or SharePoint files and folders to Experience Cloud users without requiring them to have a Google Drive or SharePoint account.

- Share linked files and folders with Experience Cloud users from within Salesforce
- Control exactly what gets shared from directly inside Salesforce
- Works with both Google Drive and SharePoint

Accept & Organize Experience Cloud Uploads

Give external users a simple, reliable way to submit documents through your Experience Cloud site. Manage incoming files from a single location without overwhelming your Salesforce storage.

- Add the file uploader component directly on your Experience Cloud site
- Automatically route uploads to designated Google Drive or SharePoint folders
- Configure routing rules using Record-Triggered Flows
- Reduce Salesforce storage costs by storing files in Google Drive or SharePoint

Salesforce Requirements

In order to use Parse Connect you must have one of the following org editions from Salesforce:

- Enterprise
- Unlimited
- Force.com
- Developer
- Performance
