

Map For Any Object

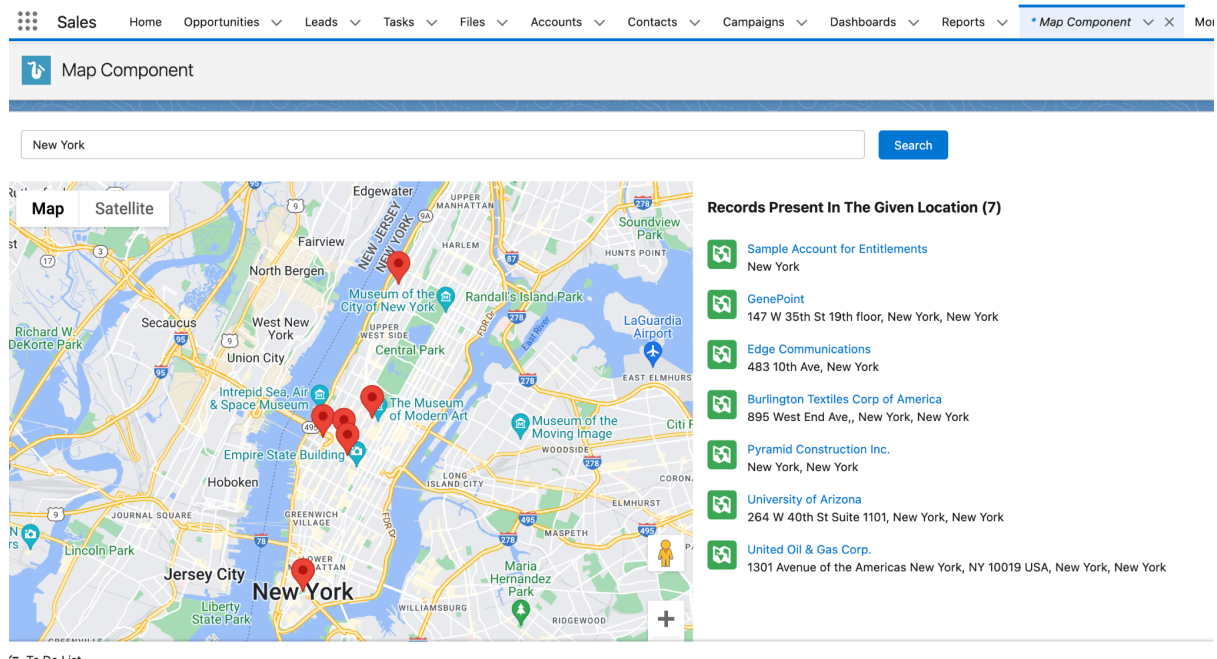

Features

- Search with a record address field(Street, City, state, country, postcode) and find all results matching the search criteria.
- User can easily find location of a sObject record in the Map
- Use the same component for any object, no need to develop individual component for each object
- Users can easily navigate to a location based on address details.

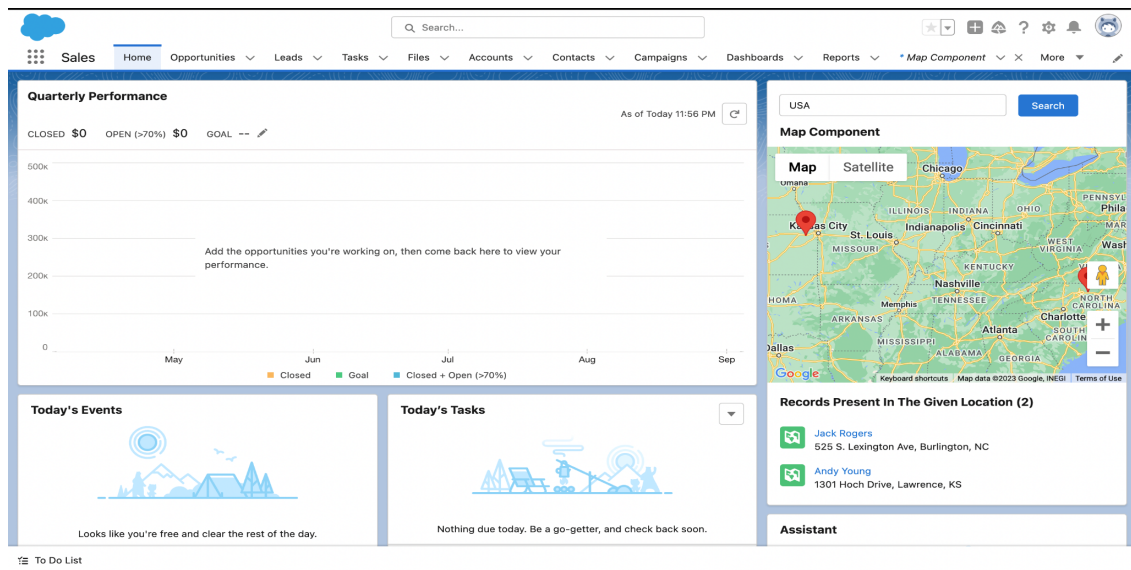

Map Component Functionalities

Placing Map Component(**mapCompEnhanced**) as a Tab

LWC component for the map navigating to multiple locations based on the data returned from the apex method.

- Placing map component in Homepage.
