

# Track Anything!

## Release Notes and Limitations

| Date                     | Version  | Release Name     | Notes                                                                                                                              |
|--------------------------|----------|------------------|------------------------------------------------------------------------------------------------------------------------------------|
| 2020-05-01 to 2020-06-22 | V1.01-09 | Beta             | Beta/test releases                                                                                                                 |
| 2020-06-23               | V1.10    | June 2020        | First stable release                                                                                                               |
| 2020-07-06               | V1.11    | July 2020        | Fix security issues                                                                                                                |
| 2020-10-01               | V1.12    | October 2020     | Update jQuery and fix security issues                                                                                              |
| 2020-10-16               | V1.13    | October 2020 v2  | Fix security apex CRED checks                                                                                                      |
| 2020-10-20               | V1.14    | October v3       | Final Security Review                                                                                                              |
| 2021-01-26               | V1.15    | January 2021     | Fix profile metadata api logic                                                                                                     |
| 2021-02-16               | V2.0     | February 2021    | App logo change                                                                                                                    |
| 2021-02-23               | V2.1     | February 2021 r2 | Pagination updates                                                                                                                 |
| 2021-07-26               | V2.2/3   | July 2021 r2     | Fixed report errors and opened up Record History reporting.                                                                        |
| 2021-07-28               | V2.5-2.9 | July 2021 r2     | SOQL optimization. New "Track Anything User" permission set that works with platform users.                                        |
| 2021-08-01               | V3.0     | August 2021      | Fixed permission set and added error messaging                                                                                     |
| 2022-03-01               | V3.1-3.2 | March 2022       | Fixed "Export CSV" on reports                                                                                                      |
| 2022-04-13               | V3.3     | April 2022 r1    | Deprecated "Track Anything Standard" permission set replaced with "Track Anything User" permission set and support for communities |
| 2023-01-31               | V3.4     | January 2023 r1  | Fixed 30 character apex class name limit                                                                                           |
| 2025-02-25               | V4.0     | Sprint 2025      | Fixed bugs and enhanced support for lightning UI.                                                                                  |
| 2026-06-04               | V5.0     | June 2026        | Fixed bugs and class enhancements                                                                                                  |
| 2026-07-02               | V5.1     | July 2026        | Fixed bugs.                                                                                                                        |

## Limitations

### Fields Not Supported

The following field types are not supported:

- Auto Number
- Formula
- External Lookup Relationship
- Text (Encrypted)

The following standard fields are not supported:

- ID (because they don't change)
- Last Modified By/Date
- Standard fields that do not invoke APEX triggers

### Object Not Supported

Most standard objects are supported but not all due to Salesforce.com limitations on triggers and lookups. E.g., Recommendation and IdeaComment. If there is an object you do not see but believe

should be trackable, feel free to contact [support@techservs.ca](mailto:support@techservs.ca) and we can confirm explicitly if we can/cannot track the object.

### **Data Storage**

Track Anything will consume standard Salesforce.com data storage. Please be cognizant of your storage limits when tracking objects and fields. E.g., Tracking "Views" will take up lots of storage than just tracking field changes.

### **Community**

This app supports tracking of community users, however, due to security limitations, community users can only see record-level history that resulted in updates they made. Updates made by other users will not be visible to community users.
