

Card Payments

A no-code app for Salesforce that gives cardholders the power to make and manage payments toward their card balance on their own, while also integrating the data you need to provide them with excellent customer service.

Customer self-service

Digital-first, in-app payment interface makes it simple and convenient for cardholders to make and manage payments toward their card balance in one place.

Use case: Self-service one-time payments

Customers can make a one-time payment on their card balance within the same interface they use for all other banking or card activities. It features the ability to see card balance and minimum payment information, as well as select the date, amount and account from which to pay.

USE CASES

Use case: Self-service recurring payments

Customers can set-up and manage recurring payments on their card balance within the same interface they use for all other banking or card activities. It features the ability see card balance and minimum payment information, as well as select the start and end dates, amount and account from which to pay.

Recurring Payment
Cumulus Platinum (ending in 0078)

It's time to setup recurring payments.
Choose when you'd like to schedule your recurring payments.

USE CASES

Agent-assisted payments

When customers do need help with a payment, branch and contact center agents will have a 360° view of their financials in Salesforce in order to provide assistance or complete payments toward a card balance on the customer's behalf.

Use case: Agent-assisted recurring payments

Branch and contact center agents have a complete view into customer financials, making it easy for them to assist in setting up and managing recurring payments toward a card balance when needed — without ever having to leave their Salesforce screen.

Use case: Agent-assisted one-time payments

Branch and contact center agents have a complete view into customer financials, making it easy for them to assist in making one-time payments toward a card balance when needed — without ever having to leave their Salesforce screen.
