

Box for Salesforce

Boost mission success with secure collaboration and document management

Box for Salesforce Government Cloud centralizes critical case management, reducing friction for your teams by empowering them to securely access and edit files, sign documents, and collaborate with internal colleagues, external partners, and constituents. Best of all? You can apply your native security compliance, and governance to all content stored in Box.

Streamline work with a secure single source of truth

Internal users and external stakeholders can review, update, and add files + folders — all without leaving Salesforce.

Unlimited storage on Salesforce

Eliminate the need to worry about storage limitations and paying for storage on Salesforce.

Work on-the-go securely from any device

Enable your staff to work faster, stay in sync, and access the files they need with secure mobile access.

The Power of Box for Salesforce Government Cloud

Government Agencies and their contractors face unique challenges: managing multiple legacy systems, rising customer expectations, increasing cyber security threats, and adhering to ever-changing rules and regulations. All of which makes compliant and trustworthy processes and tools for document management and collaboration mission critical.

Box has a proven track record for empowering organizations that work in highly regulated sectors. Salesforce's built-in enterprise grade security enables Box for Salesforce users to collaborate, protect private information, and create onboarding and training experiences for their employees, service members, citizens and partners — all while ensuring content security, compliance, and governance.

Compliant content management

Government agencies can further reinforce a zero trust security model. By combining Box and Salesforce within the framework of zero trust, you can establish granular control over data access, implement continuous monitoring for potential threats, and maintain a strong security posture across all collaborative activities with FedRAMP, IL-4, ITAR, CUI, CJIS, HIPAA, IRS-1075, and other highly regulated data sets.

Benefits of Box for Salesforce

Document management and collaboration capabilities directly in Salesforce via Box
