
CASE STUDY

Secure Multi-Partner Sites for Acar Holding

Client: Acar Holding

Challenge

Acar Holding works with multiple business partners, each needing their own secure space, but with a complex, multi-layered permission structure that couldn't tolerate cross-visibility between partners.

Solution

ALAZ Solutions built separate, secure Experience Cloud sites for each business partner, with carefully scoped permissions ensuring every partner sees only the information relevant to them.

Result

Acar Holding now runs a precise, partner-specific access model without added administrative overhead. The client specifically noted that this level of permission precision made a real difference given the complexity of their multi-partner structure.
