

CASE OVERVIEW

The customer is one of Australia's largest CRO with a global footprint and specialization in early phase clinical trials. It has the longest-operating early phase unit in Australia, where research is conducted in early-phase trials and first-time-in-human studies. The customer selected Cloudbyz integrated, cloud based suite of solutions to automate its clinical trial operations and leverage the accelerated collaboration within the organization.

CHALLENGES

The customer's existing set of legacy systems operated in silos and were not able to scale up fast to meet the expectations of business. This resulted in fragmented communications and increase in maintenance costs. To mitigate the issues from these individual data silos, the customer sought a partner with proven cloud skills and a single, unified system that could replace existing ones to reduce IT overheads and provide its staff with a centralized solution that could fulfill all its clinical needs.

SOLUTIONS

The customer selected Cloudbyz Clinical Trial Management Solution (CTMS), Patient Recruitment, eConsent, and eReg/ eSource solutions, all of which could be integrated as a single system to perform end to end trial management activities. The customer can now leverage centralized view of data and streamline workflows which would help it to overhaul existing processes and make it more efficient. Powered by Cloudbyz, the customer can better focus on saving patient lives through clinical research.

BENEFITS

The customer was able to run end-to-end global clinical trials and achieve efficiency, seamless collaboration with internal and external stakeholders, and reduce its overall time to market, with increased savings. Our CTMS solution helped in trial operations management at site level with streamlined processes and accelerated patient recruitment.

Our cloud-based repository for sites helped to digitally capture, manage, share, and store all data and stay inspection ready with real-time visibility for CROs, sponsor, and monitors.

Cloudbyz products deployed for this solution
