

DataSyncX Documentation

CloudMetic has introduced a new initiative to enrich the customer experience: the Record Manager App (**DataSyncX**). This application is created to handle and perform DML, clone records, and numerous other tasks with your Excel records. Ready to dive in? To gain a deeper understanding of the application, we have outlined each step in Detail below for your convenience.

But before that! Let's understand this application (INSTALLATION) process

Step 1 – First thing first, open **Salesforce AppExchange** in your browser.

<https://appexchange.salesforce.com/>

Step 2 – Once logged in, you'll see a **search bar** at the top of the page. Simply type '**DataSyncX**' into the search bar to locate the application.

Step 3 – You will now see the application displayed.

Step 4 – Upon clicking it, you'll be able to view the application's highlighted **features, functionality,** and **detailed** information.

Step 5 – You will now see the '**Get It Now**' button at the top-right corner of your screen. Simply click on it to install the application.

Step 6– It will prompt for your existing login account details or provide an option to sign up for a new account.

Step 7 – After that, you will be automatically redirected to the Salesforce login page.

enter your Salesforce credential and hit the Log In button.

Note: Before proceeding to the next step, please note that you will be prompted to grant permission. You will be presented with three options: Single User, All Users, and Only Admin. Please select 'All Users.' This process will take approximately 5 minutes.

Step 2 – Now that the package is installed, go to the App Launcher, search for "DataSyncX," and click on it.

Step 3 – Now, welcome to **DataSyncX**! This is what its dashboard looks like.

Here, you'll find five key tabs: **Record Manager**, **Data Import from Excel**, **Scheduled Jobs**, **Record Manager Settings**, and **Data Cleansing**.

1. **Record Manager** – This feature allows you to manage your records efficiently with Update and Delete options. You can easily modify or remove any part of a specific record.
2. **Data Import Excel** – Performs DML operations Insert, Update, Upsert, and Delete.
3. **Clone Records** – It enables you to duplicate an entire record while offering features that allow you to modify the API name of the object as well.
4. **Record Manager Settings** – This Custom Object tab lets you view records from the Record Manager, where you can track past operations, filters, and any new values you've applied.
5. **Data Cleansing** – Easily manage your data: effortlessly merge, delete records in bulk, and streamline your workflow.

Now, we will review each of the above-mentioned tabs one by one for better understanding.

Record Manager

Perform updates or delete them using the record manager. The image mentioned below is the front interface of the Record manager.

Step 1 – Now, you can see there 4 bars **Select object, Edit Rule, Edit Criteria, and Action on Records**.

Step 2 – As you can see, in the 'Select Operation' field, there are two options: **'Update' and 'Delete'**.

Step 3 – After selecting the operation, choose the object. There are multiple object options available, so you can select according to your requirements.

Step 4 – Now, you will move to the next loop **Edit Rule**, where you must add the **Rule Name** for that specific record.

The screenshot shows the 'Edit Rule' step in the DataSyncX Record Manager. The 'Rule Name' field is highlighted with a red box. The 'Description' field is empty. The 'Previous' button is visible.

Step 5– After that, you will get the description option field, which is optional whether you want to put the description in the action or not, and hit the next button.

The screenshot shows the 'Edit Rule' step in the DataSyncX Record Manager. The 'Rule Name' field contains 'Test 4'. The 'Description' field contains 'ABC' and is highlighted with a red box. The 'Next' button is visible.

Step 6 – After this, Now in Rule Criteria you will see the 2 options **Criteria are Met** and **All Records**.

Criteria are Met – If you want to Update or delete some specific record then select this option.

All Records – If you want to act on the entire records then select all records.

Criteria Are Met

In this section, you will get multiple options to select the particular fields you want to update or delete.

Step 7 – First, select the field, and then proceed to the next step.

Step 8 – Next, in the Operator section, you can specify the value for the particular record using options such as '**Equal,**' '**Not Equal,**' '**Starts With,**' and more.

The screenshot shows the DataSyncX Record Manager interface. At the top, there's a navigation bar with 'DataSyncX' and 'Record Manager' selected. Below it, a progress bar shows four steps: 'Run this rule if the', 'Criteria Are Met', 'Rule Criteria' (current), and 'Action on Records'. Under 'Run this rule if the', there's a dropdown set to 'Criteria Are Met'. The 'Criteria Are Met' section has a 'Fields' dropdown set to 'Account Name' and a 'Previous' button. The 'Rule Criteria' section has an 'Operator' dropdown menu open, showing options: 'equals', 'not equal to', 'starts with', 'contains', and 'does not contain'. The 'Value' field is empty, and there's an 'Action' button with a '+' sign.

Step 9 – Now, add the value you want to change and hit the Next button.

The screenshot shows the DataSyncX Record Manager interface. The 'Operator' dropdown is now set to 'equals'. The 'Value' field is now populated with a red box around it, indicating the input area. The 'Action' button is still present. The 'Previous' and 'Next' buttons are at the bottom left.

Step 10 – Now, you will move to the **Action on Records** section, where you can change the value of the selected record that you want.

The screenshot shows the DataSyncX Record Manager interface. At the top, there is a navigation bar with the DataSyncX logo and menu items: Record Manager, Data Import Excel, Schedule Job, Record Manager Setting, and Data Cleansing. Below this is a search bar. The main section is titled 'Record Manager' and features a progress bar with three green checkmarks and a blue 'Action on Records' button. The configuration area includes a 'Field' dropdown set to 'Account Name', an 'Operator' dropdown set to 'equals', and a 'Value' text input containing '12345'. An 'Action' button with a '+' icon is also present. At the bottom of this section are three buttons: 'Previous', 'Update', and 'Schedule'. A red rectangular box highlights the 'Value' input field and the 'Action' button.

Step 11 – After that, simply hit the **Update** button.

This screenshot shows the same DataSyncX Record Manager interface as the previous one. The configuration for the search criteria remains the same: 'Field' is 'Account Name', 'Operator' is 'equals', and 'Value' is '12345'. In this step, a red rectangular box highlights the 'Update' button, which is located between the 'Previous' and 'Schedule' buttons at the bottom of the configuration area.

You will also receive a pop-up message asking whether you want to run this batch.

Step 12 – You will see the progress batch through which you can see the percentage of the process.

All Records

All records are simply functioning if you select this option your command will opt-in all the records.

Step 13 – Simply select the **fields** that you want to change..

Step 14 – Add the **Value** for the Field and hit the **Update** button.

Step 15 – Now, simply click the '**Update**' button, and your process will be completed.

Note: The process described above is specifically for direct updates. However, there is also a scheduling option. Let's proceed with the scheduling option.

Step 15 – After hitting, the Schedule button, you will get the pop-up of Schedule criteria for particular times and for multiple times.

Step 16 – If you hit the for particular time option then, you'll get multiple options to select the particular time date, day, and year.

After filling in the selected date and time hit the done button on the right bottom of your screen and the process gets completed.

Schedule Jobs

Your scheduled batch is now complete. You can view your scheduled batches in the 'Scheduled Jobs' section, where you will find the selected time and date, as well as an option to abort if needed.

Step 1 - This is what the Schedule Job Interface looks like.

Step 2 - After this, you can see your records which you scheduled it for late with the selected Time, Date, and year.

Step 3 - There is Abort option is also available if you want to stop the process, so you can easily click on that button for an instant stop.

Record Manager Settings

All completed processes related to the Record Manager are now displayed in the Record Manager Settings.

That is what the Record Manager Settings front interface looks like.

Step 1 - As you can see all the records performed in the record manager name section.

Step 2 - Once you click on any of the records you can see the details of the selected record like Account name, Object, Rule name, and many more.

Step 3 - There is also a 'Related' section where you can view filter criteria, field updates, and expectations.

Data Import Excel

Step 1 – This is what the Import Excel Data interface looks like. It allows you to upload the entire file in a single operation.

Step 2 – First, you'll get the action option, where you see there are 4 options available.

- Insert
- Update
- Upsert

- Delete

Step 3 - Select the Object on which you want to perform DML operations.

Step 4 - After this, select the Batch Size, here you can change up to **2000 Batch Size** is The number of Records to process in a single transaction.

The screenshot shows the 'Data Import Excel' section of the DATASYNCX application. The interface includes a top navigation bar with the DATASYNCX logo and a search bar. Below the navigation bar, there are tabs for 'Record Manager', 'Data Import Excel', 'Schedule Job', 'Record Manager Setting', and 'Data Cleansing'. The main content area contains the following fields:

- Action:** A dropdown menu with 'Insert' selected.
- Object:** A search bar with the placeholder text 'Search Object'.
- Batch Size:** A text input field containing the value '200'. This field is highlighted with a red rectangular box.
- File Upload:** A section with the label 'Excel File' and three buttons: 'Upload Files' (with a blue upload icon), 'Or drop files', and 'Import'.

Step 5 - In the end, after completing the above process you can simply upload your selected Excel file by just clicking on the **Upload File** option.

This screenshot is identical to the one above, showing the 'Data Import Excel' interface. In this view, the 'File Upload' section is highlighted with a red rectangular box. The 'Batch Size' field now contains the value '200'.

Excel format for Data Import Excel

1. **Columns in Excel:** Columns should be the same as the field API Name in Standard/Custom Object below is the example of Excel for

inserting Account Records using the Data Import Excel tab

	A	B	C	D	E
1	Name	Rating	TempDateDateField	DataSync_X__SLAExpirationDate__c	
2	Test 1	Hot	19-06-2024	2024-06-19	
3	Test 2	Hot	20-06-2024	2024-06-20	
4	Test 3	Hot	21-06-2024	2024-06-21	
5	Test 4	Hot	22-06-2024	2024-06-22	
6	Test 5	Hot	23-06-2024	2024-06-23	
7	Test 6	Hot	24-06-2024	2024-06-24	
8	Test 7	Hot	25-06-2024	2024-06-25	
9	Test 8	Hot	26-06-2024	2024-06-26	
10	Test 9	Hot	27-06-2024	2024-06-27	
11	Test 10	Hot	28-06-2024	2024-06-28	

Here Name, Rating, DataSync_X__SLAExpirationDate__c is the ApiName of fields in Account Object for the date field we need to convert Excel date format into a string by using Excel formula i.e =TEXT(value, format_text)
For example:

- Date: TEXT(2024-04-19,"yyyy-mm-dd").
- DateTime: TEXT(2024-04-19,"yyyy-mm-dd hh:mm:ss").
- Time: TEXT(15:10:10 , "hh:mm:ss").

2. **Rows:** Rows are justified as Field Values. The number of records depends on the number of rows, for performing multiple operations like, Insert, Delete, Update, and Upsert.

"Note: For Update or Delete ID Column is mandatory. We also mentioned below for user reference".

	A	B	C	D
1	Id	Name	Rating	
2	001Ho000012DRMGIA4	Test 1	Hot	
3	001Ho000012DRMHIA4	Test 2	Hot	
4	001Ho000012DRMIIA4	Test 3	Hot	
5	001Ho000012DRMJIA4	Test 4	Hot	
6	001Ho000012DRMKIA4	Test 5	Hot	
7	001Ho000012DRMLIA4	Test 6	Hot	
8	001Ho000012DRMMIA4	Test 7	Hot	
9	001Ho000012DRMNIA4	Test 8	Hot	
10	001Ho000012DRMOIA4	Test 9	Hot	
11	001Ho000012DRMPIA4	Test 10	Hot	

Data Cleansing

Through this feature, you can Delete records, Merge, and Duplicate.

The screenshot shows the DataSyncX application interface. The top navigation bar includes the DataSyncX logo, a search bar, and several menu items: Record Manager, Data Import Excel, Schedule Job, Record Manager Setting, and Data Cleansing. The Data Cleansing section is active. Below the navigation bar, there is a 'Filter Criteria' section with two dropdown menus: 'Select Object' and 'Select Object Field'. To the right of these dropdowns are '+' and '-' icons. Below the dropdowns is a blue button labeled 'Fetch Records'. The main content area below the filter criteria is a large blue rectangle.

Step 1 – Select the Filter Criteria With 3 objects **Account**, **Contact**, and **Lead**.

The screenshot shows the DataSyncX application interface. The top navigation bar is the same as in the previous screenshot. The 'Filter Criteria' section is now populated with a list of objects: 'Account', 'Contact', and 'Lead'. The 'Select Object' dropdown menu is open, and the list of objects is visible. The '+' and '-' icons are still present to the right of the dropdown. The 'Fetch Records' button is still visible below the dropdowns. The main content area below the filter criteria is a large blue rectangle.

Step 2 – You can also add multiple object fields by just clicking on the + option.

Delete Merge

Step 8 - Finally, you will get the pop-up (Records are successfully Deleted). And you can also see below, that records are deleted.

Step 9 – If in case you want to merge the duplicate records into one, you can simply choose the records and hit the Merge option.

Step 10 – After selecting the merge option, you will get a pop-up (Records are successfully merged).

Clone Records

Step 1 – First you see the interface of the application.

Step 2 – Open the **App launcher** on your left top.

Step 3 - Go to any **Object Record Page** that you want to clone here
We are taking it into Account.

Step 4 - Afterward, select any Record on the **Account List** view page.

Step 5 - Now after selecting the account, click on the **setting gear icon** on your top right.

Step 6 - Now Select the **Edit page option** and move to the next step.

Step 7 – Then, search **CloneRecorder** in the **component search bar** on your left.

Step 8 – **Drag and Drop** the CloneRecorder option into the **account record page** where you want to add the clone record Component in your record Detail Page.

Step 9 – After completing this, fill in all the details on your right, first (**comma-separated child object API names**). Enter Contact or opportunity.

Step 10 – Enter the **Clone button label** which will be the name of the clone button.

Step 11 – Enter the fields, which you don't want to be cloned.

Step 12 – Add a **Heading** as you need.

Step 13 – Now you have to save the updated actions, by clicking the **Save** button on your top right.

Step 14 – Now after saving this component, hit the **back** button for the view of the object record detail page.

Step 15 – After **saving** and **activation** this component will be visible on the object record page.

Step 16 – To clone this account click, you have To clone this account, Give a new account name(if you want to rename the cloned record) in the Column select the child record to clone, and then click on clone.

Step 17 – If you want to clone only a single child record with the same account name then select which record to clone and give the same account name then click on the clone.

Step 18 – If you want to clone only a child Object record with a different account name then select which record to clone and give the different account name then click on the clone.
