

3 Reasons for IT

Secure Platform

ShowCycle is a Salesforce Certified app, which means it is tested by Salesforce and meets their standards to run in their secure environment. Security is baked into everything in the Salesforce platform from the get-go, so that tens of thousands of customers know that their data is always safe, and always theirs – to be accessed when, where, and how they intend.

Open Architecture and API

ShowCycle architecture is open, well documented, and publicly available. There are no secrets. The Salesforce platform is known for its well documented API that makes it possible to build on or customize the platform, ShowCycle included, no holds barred. The IT team can rest assured that ShowCycle can be extended as needed should you need to, be it adding a few fields or building complex automations.

Complete Control

ShowCycle is an app inside Salesforce, a cloud platform. And so, system administration, data management, licenses et. al. is all managed by the customer organization. Complete empowerment! ShowCycle professional services team, and technical support is always available for any assistance but has no access to your system unless access is explicitly granted.
