

Intelligent Document Processing (IDP) Solution

Challenges of Manual Document Processing

Unstructured Document Formats

Manual Data Entry

High Risk of Errors

Lack of Standardization

Poor Document Visibility and Storage

DocStudio's AI recognition tool is designed to eliminate the challenges created by manual entry by automating the data extraction process and seamlessly integrating with your IT systems.

AI Document Recognition and Data Extraction

The DocStudio platform **automates the entire process** of extracting, validating, and delivering data in a structured format.

It also enables teams to **create response documents, set up approval workflows**, route documents for review and signature, and manage the full document lifecycle.

Unstructured Documents
in PDF, DOCX, XSLX, PNG, JPG formats

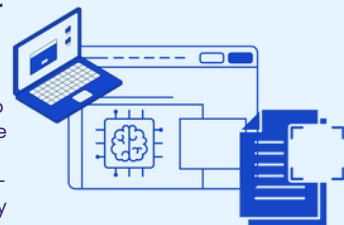

Structured Data
searchable and ready for integrations

Processing through Web Interface or API

DocStudio works with **any type or volume of documents**.

Upload PDFs or images, and our AI automatically extracts the key information. You or the DocStudio team can approve and moderate the recognition results, then get the data in the format you need—XML, JSON, PDF, and more for easy use in your existing systems and integrations.

DocStudio's **API integration** allows businesses to automate document uploads at scale. Extracted data is seamlessly transferred to **ERP, CRM, POS, WMS, and other systems**.

Benefits

All-in-One Platform

Works with Any Documents

Fast Deployment

Seamless Integration

Built-in Human Validation

Quick ROI and Lower Costs

Dynamic Document Creation

Highly Configurable
