

SEMLER SCIENTIFIC

CUSTOMER SUCCESS STORY

Customer Introduction

Semler Scientific, Inc. specializes in developing, manufacturing, and marketing innovative products and services that contribute to the early detection and treatment of chronic diseases. Founded in 2007, Semler focuses on providing solutions that enhance patient outcomes and improve healthcare delivery.

The company's flagship product is the QuantaFlo™ System, a vascular diagnostic device designed to assist healthcare providers in the early detection of peripheral artery disease (PAD)

Challenge #1: Semler Scientific Inc does numerous component purchases from vendors, necessitating quality inspections for these components and the maintenance of LOT history, a process currently conducted manually on paper.

Solution #1: Axolt ERP was able to customise the inbound quality check process to align such that all parameters required to LOT track and quality check was seamlessly automated ruling out the chance for manual errors.

Challenge #2: Semler Scientific Inc works with multiple warehouses and 3rd party manufacturing units. Moving components and tracking their stocks across the warehouses was chaotic. Justifying variation in stock was difficult because of the number of occurrences in internal transfer.

Solution #3: The stock transfer feature within Axolt ERP seamlessly tracked the movement of components between warehouses, while the stock take feature enabled adjustments for any detected variations, effectively handling excess inventory and stockouts.

Challenge #3: Semler Scientific Inc dealt with a large number of shipping orders. All of the details related to shipment, returns, tracking and paid by was being done manually. Moreover, it was crucial to track the delivery.

Solution #2: The out-of-the-box 'outbound logistic' feature in Axolt ERP seamlessly integrates with FedEx and UPS, simplifying the shipping process. Shipping labels are generated directly within the application, and order statuses are automatically updated, streamlining operations and enhancing efficiency.

Conclusion: Axolt ERP streamlined workflow, enhanced efficiency and accuracy in component procurement. It facilitated smooth movement and tracking of components across multiple warehouses, effectively managing stock variations and ensuring optimal inventory levels. It also simplified the manual effort and enhanced visibility into the shipping process. Overall, Axolt ERP's comprehensive solutions not only addressed Semler Scientific Inc's specific challenges but also improved overall operational efficiency, accuracy, and transparency.

ABOUT AXOLT ERP

AXOLT ERP supports growth of small and medium-sized businesses by integrating all their front and back office processes into a single system. Built on the Salesforce platform, it provides complete visibility of the supply chain from supplier management, inventory management, warehousing and scheduling to sales order management, delivery and warranty & support. It is particularly suited to retailers and manufacturers looking to be more efficient, reduce costs and make it easier for customers to do business with them.
