

Elevent has several options for how you present yourself and conduct eCommerce online.

Websites

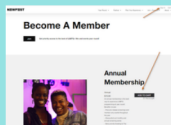

1 YOUR OWN "MICROSITE"

With no additional effort, a clean, responsive mini-website is created for you on goelevent.com/yourname. Visitors can browse and filter events and buy any membership, admission item, and or donate from a single cart.

2 EMBEDDED WIDGETS

Copy and paste Elevent's unique embedded widgets. Almost magically add small elements for visitors to login, see their cart, and shop from your own website--any website--with your own look & feel.

3 WORDPRESS PLUGIN

40% of websites use WordPress. Elevent has it's own WordPress plugin that automatically adds Elevent events and all the supporting info to your website. Show off your schedule of events with the plugin's filtertable/searchable calendar, grid, and list views.

4 CUSTOM WEB API

Set your website team loose with Elevent's modern APIs. Let them create their own custom everything and talk to Elevent's online interface. Embedded Widgets accelerate dev time and minimize issues.

5 ELEVENT HOSTED SITES

Elevent can host, support, migrate, maintain, and even custom design an entire bespoke website for you. Hosted Sites are built on unrestricted WordPress--the Elevent for WordPress plugin is included at no additional cost.

Other Channels

6 ANALYTICS AND TRACKING

Because Elevent's cutting-edge embedded widgets are actually local parts of your own website, you'll find real success tracking promotions and campaigns from source through conversions in your currency.

7 NATIVE INTEGRATIONS

Add on additional integrations to existing and new 3rd party destination sites, like Fandango.com or supported outlets that talk to the Elevent API.

8 3RD PARTY APPS

Your own downloadable event app can access the real-time schedule of events, items for sale, and embed on-site and last-minute sales from a visitor's mobile device.
