

NETSUITE + SALESFORCE INTEGRATION

Native. Fast. Reliable. Real-Time.

Connect Oracle NetSuite and Salesforce natively — bring live sales orders, invoices, payments and inventory onto every Salesforce record.

NetSuite runs the books; Salesforce runs the pipeline — and between them sits a productivity tax. Reps Slack finance for an A/R balance, finance rekeys closed deals into Sales Orders, and ops chases fulfilments across both systems. Breadwinner is a Salesforce-native managed package installed from the AppExchange — never routed through middleware.

Built for multi-subsiary

Multi-subsiary, multi-currency and multi-tax handled natively, with SOC 2 Type II security — finance data never leaves Salesforce.

Same-day deploy at scale

Deep out-of-the-box mappings plus an Apex Generator for custom record types — most teams install and sync the day they buy.

Bi-directional real-time sync

Sales orders, invoices, customers, items and fulfilments flow both ways in near-real time. No middleware, no overnight reconciliation.

What syncs between NetSuite and Salesforce

Customers / Companies	NetSuite Companies linked to the right Salesforce account, subsidiary-aware.
Contacts	Customer contacts kept in sync across both systems.
Estimates & Sales Orders	Generate a NetSuite Sales Order from a Closed-Won Opportunity in one click.
Invoices & Credit Memos	Live A/R, payment history and credit memos surfaced on the account.
Item Fulfilments	Fulfilment and shipping status tied back to the originating deal.
Items & Inventory	Live inventory, matrix items, price levels and per-location stock for quoting.
