

Release Notes

For product information go to <https://tigerfacesystems.com/products/flow-data-table/summary>

Version 4.11.0-ga.31/ 4.11

This release contains the following enhancements:

1. Legacy Aura data tables have been deprecated and are no longer supported.
2. A new Search / Filter feature has been added.
3. Full Rich Text editing is now supported.
4. Fixed popup window cutoff / truncation which occurred in setup/configuration and end-user editing within a flow.

Version 4.7.0-ga.27 / 4.7

This release fixes the table rendering issue which occurs when Lightning Web Security is enabled in Setup -> Session Settings.

Version 4.6.0-ga.26 / 4.6

This release contains the following bug fixes:

1. Fixed bug when currencies were edited when Multi Currency was enabled.
2. Fixed bug when numbers were edited with foreign currencies.
3. Fixed error message that would occur if an object and custom record type were selected and then another object was selected.

Version 4.5.0-ga.25 / 4.5

This release contains the following bug fixes:

- 1) Fixed bug when two tables were on same screen and selecting records in one table caused records to be unselected in the other table.
- 2) Fixed limitation where editing records after they were selected did not result in edits being in the selected records output list.
- 3) Fixed bug where user had to click radio buttons twice on Android and iOS in order to selected a record.
- 4) Fixed bug where picklist values with leading or trailing spaces resulted in values not being selected when edit popover displayed.

Version 4.2.0-ga.22 / 4.2

This release fixes the bug where preselected records were not copied to selected records out when user did not select/unselect any records while viewing the data table.

Version 4.0.0-ga.21 / 4.1

This release contains the following bug fixes:

- 1) Set Wrap Text in column drop down when column defaults to Wrap Text. In the prior release it always indicated Clip Text even if column was configured to default to Wrap Text.
- 2) Corrected bug which occurred when editing Eura currencies.

Version 3.9.0-ga.19 / 3.9

This release contains a new Lightning Web Component that provides the following features:

- 1) A single Flow Data Table component is provided that supports most standard and all custom objects. You no longer need to generate tables for your objects.
- 2) Initial column widths can now be specified for each column.
- 3) Wrap text can now be specified for each column.
- 4) If a single record is selected that record is available in a single record output variable.
- 5) Support for newer standard objects such as ContactPointAddress.
- 6) This version is backward compatible with any previously installed version of this product. However, you will need to use the new Flow Data Table in order to utilize the initial width, wrap text, and single record output features.

Version 3.5.0-ga.15 / 3.5

Corrected JavaScript error which occurred when a flow was run in an Aura component. When the Aura component handled the flow's finish event and navigated to another page an error was displayed to the user.

Version 3.4.0-ga.14 / 3.4

Added support for Rich Text fields such as formula fields that output HTML and Rich Text Area fields.

Version 3.3.0-ga.13 / 3.3

This version contains the following enhancements:

1. Support text wrapping for all field types.
2. Add property to the Data Table so that the number of records that are loaded on a mobile device is configurable. In the past this was hard coded to 3 records. This new feature affects the number of records initially loaded and the number of records loaded when the Load More button is selected.
3. Add a custom profile to the Managed Package which Apex tests will utilize. In past releases Apex used Standard User Profile and test could fail if access rights were assigned to the Test Data Table Custom object.
4. Enable mobile view when the Data Table is displayed on a tablet device.

Version 3.2.0-ga.12 / 3.2

This version contains the following enhancements:

1. Add Delete Table page to the utility application.
2. Provide support for Professional Edition orgs that do not have API feature enabled.
3. Add the Run Data Table Permission Set to prepare for the Summer '20 Critical Update.
This update requires user profiles and permission sets to have access to Apex classes that are invoked by Lightning Web Components.
4. Display busy indicator when user sorts records.
5. Enhance editing so if user edits cell then clicks on another cell the prior cell's edited value is saved. Previously you had to click to a non-cell area of the table to save.
6. Correct the defect that occurred when editing a cell with an undefined value it was incorrectly initialized with a previously edited cell's value.

Version 3.0.0-ga.10 / 3.0

The initial release of the Ultimate Edition product.

1. Provide support for editing two tables on the same flow screen that display different object data.
