

Taktikal.

Secure onboarding & KYC compliance

Integrated identity verification in moments. Get the latest in fraud prevention measures with identity authentication built-in to document e-signing.

Taktikal offers trusted industry-leading live ID authentication services to help ensure the identity of the person behind every signature.

Authenticate securely and sign digitally with an advanced signature in just a minute.

Easy connections to CRM and document management systems for safekeeping of documents and data.

Reduce paper consumption and transportation emissions by signing documents digitally - from a computer or smartphone.

Simple implementation of Taktikal Smart Forms into existing processes and interfaces for service providers and customers.

White label options so your brand stays consistent throughout the verification and signing process.

Our solutions adhere to the strict requirements of the eIDAS regulation which makes the signature equivalent to handwritten.

Use cases

User onboarding

Offer custom digital workflows in a white label environment to speed up and simplify the onboarding process.

Advanced signatures

Collect verified electronic signatures in moments with fast and easy signing options, all in a secure portal.

KYC compliance

Ensure compliance from the start with built-in strong ID verification and bio metrics comparison

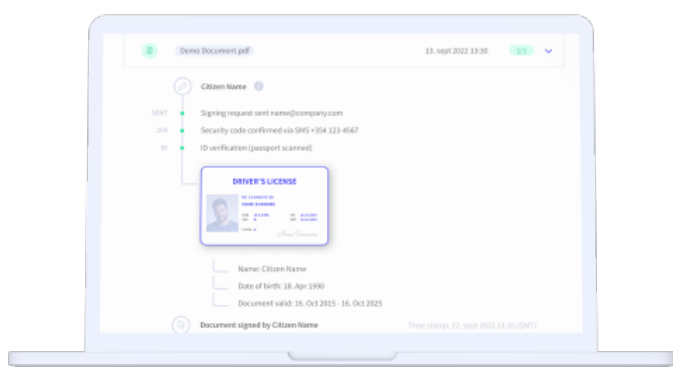

Integrated e-signature solution

Built-in to the document workflow, the identity of the user is verified as part of the e-signing process. Signatures can then be collected digitally from anywhere.

- ✓ Legally binding e-signing from anywhere in the world
- ✓ Send to multiple signees all at once
- ✓ Easily set up a sequential signing process

Every signature is set with a verified timestamp and electronically sealed to guarantee document integrity and prevent tampering with the document.

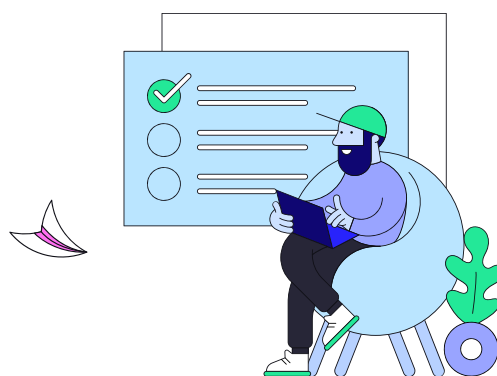

Fast ID verification

A simple interface leads users through a step-by-step process to get verified fast and lets users know what they'll need to have ready before getting started. They then:

- Present the front & back of a government-issued ID
- Will be asked to submit a selfie as a live verification measure
- Follow the steps to confirm the submission

The process is 100% automated, combining machine learning with manual video checks - all done in the background and with authentication typically occurring within seconds.

Activity log + evidence page

Stay on top of document activity with a clear log of who accessed and signed the document and when - all timestamped and tracked within the portal.

Identity verification is displayed and shows the type of ID used in the process, along with the time and date of authentication.

Use these details as an audit trail, to ensure regulatory compliance, or simply to grasp whether the workflow for a document has been completed in full.
