

Salesforce App Changelog

v4.36

- Amplitude Events are now also sent to Tractive.

v4.37

- Refactor Send Survey widget initialization from synchronous to asynchronous using Apex Continuations
 - Parallel API calls to Qualtrics (surveys + directories) instead of sequential
 - Non-blocking UI - widget loads faster and remains responsive
 - Better handling of multiple concurrent survey widget initializations
- Refactor magic string returning functions to void
- Catch potential errors in aura components and displaying them in toasts and console
- Remove QualtricsFrontlineFeedback component
- Fix: Exception in while getting campaigns: "Maximum SOQL offset allowed for apiName Campaign is 2000"

v4.38

- Fix for surveys and directories pagination

v4.39

- Add error handling to library messages requests

v4.40

- Add translations for en_US
- Enhance error handling in Apex classes
- Introduce validation for nextPage URLs
- Fix error with refreshing widget component

v4.41

- Fix filtering sent surveys by name or survey ID

v4.42

- Removed legacy Flows from the package to unblock installations
- Fixed widgets having too small size and not filling the entire component

v4.43

- Vulnerability Fixes

V4.44

- Security Improvements
