Overview:

AppExchange Listing:

<https://appexchange.salesforce.com/appxListingDetail?listingId=a0N4V00000GYfmUUAT>

Description:

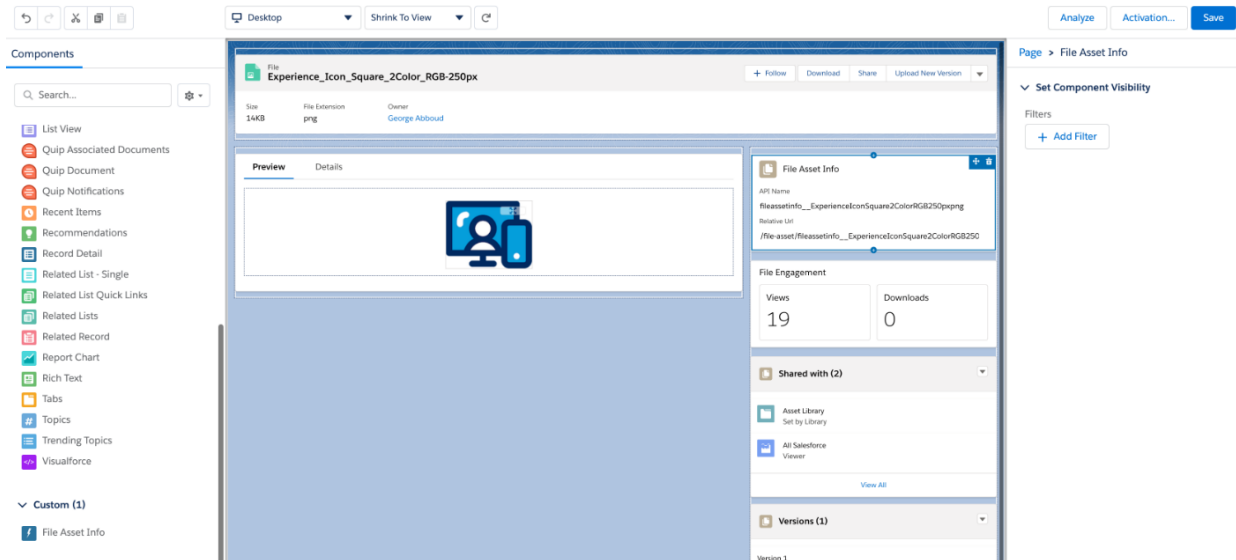

File Asset Information component to display a file asset's API name, and relative url.

If you've ever uploaded a file asset into your file library, and then forgot what you selected as the API name and now have no idea how to reference the file from an experience cloud site or a record, then this component might just be what you're looking for! Place this component on the file lightning detail page, and it will show you the file asset's API name and relative url in order to reference the file asset from various places in your org!

DISCLAIMER:

This package is free to use, but is not an official [salesforce.com](https://www.salesforce.com) product, and should be considered a community project. The functionality is not officially tested or documented, and does not come with any support, warranties, or updates. It is offered as-is.

How To Use

Create a custom lightning page for the file detail page if one does not already exist. Drag / Drop the “File Asset Info” component to the lightning page to display file asset information for the file.

Release Log:

VERSION 1.2

Installation URL: <https://login.salesforce.com/packaging/installPackage.apexp?p0=04t4x0000002ZvZ>
