

DocFynd on Salesforce Community

This article explains the steps to add DocFynd to Salesforce Community pages. This will enable use of DocFynd on Salesforce Community.

Add Documents Upload component

1. Open Community Builder.
2. Select the object you wish to add the Documents Upload component.

3. In the object record page click the "Components" tab and select the component.
4. Now, drag and drop the "*documentsUpload*" component to the record page.

5. Next, click the component and an input box will appear.

6. Enter the Record Id as `{!recordId}` and close the box.

7. After closing, the "Upload Documents" will display in the preview.

8. Click "Publish" to publish the changes.

Add Documents List component

1. Open Community Builder.
2. Select the object you wish to add the Documents Upload component.

3. In the object record page click the “Components” tab and select the component.

4. Now, drag and drop the “documentList” component to the record page.

5. Next, click the component and an input box will appear.

6. Enter the Record Id as `{!recordId}` and close the box.

7. After closing, the “Documents” list view will display in the preview.

8. Click “*Publish*” to publish the changes.

✓ This completes the setup of DocFynd on Salesforce Community pages
