

attachmentAV

Malware protection for Salesforce

Factsheet

How it works

This is how attachmentAV works when uploading a file:

1. A file is uploaded to Salesforce.
2. Salesforce triggers the attachmentAV app.
3. The attachmentAV app sends a scan job to the attachmentAV engine in a jurisdiction of your choice.
4. The engine downloads the file over encrypted HTTPS.
5. The engine temporarily stores the file on an encrypted disk.
6. The engine scans the file.
7. The engine deletes the temporary file from the encrypted disk.
8. The engine sends the scan result back to the app.
9. The app stores the scan result, publishes a platform event with the scan result, runs mitigation actions, and notifies the uploader about the scan result.

attachmentAV can also scan existing files.

Key Benefits

Simple

Enable malware protection with a few clicks. Scans newly uploaded files and existing files.

Fast

The Sophos® engine signatures database is updated hourly to protect you against the latest threats.

Up-to-date Malware Database

The signatures are updated continuously to protect you against the latest threats.

Automated Mitigation

attachmentAV deletes and notifies about infected files. Configure as needed.

Features

Real-time scan

Newly uploaded files are scanned within seconds using Sophos' leading antivirus engine. Immediate zero-day protection with an up-to-date malware signature database ensures your files remain secure from the latest threats.

Full scan

You can scan all existing files after installation. You can also define a schedule to scan all files periodically against the latest malware signature database.

Industry-leading antivirus engine

attachmentAV is powered by the Sophos® engine. Sophos is a trusted cybersecurity provider. The engine comes with immediate zero-day protection.

Automated mitigation

attachmentAV deletes infected files by default.

Notifications

attachmentAV: Your uploaded file is infected
The file you uploaded is infected by EICAR-AV-Test

3 hours ago

You can notify the uploader about scan results. By default, uploaders are notified about infected and unscannable files. For external users, an email is sent.

Lastly, all scan results are published as Salesforce platform events.

Reports

Details		Related	
Full Scan Result Number	FSR-0000000000	Status	Completed
Total Files	9456	Trace Id	ea99bfe2-95b6-41f3-a3f6-a2c1b860566e-1736758667720
Clean Files	9451	Initiated By	 Michael Wittig
Infected Files	2	Owner	 Michael Wittig
Unscannable Files	3
