

CASE OVERVIEW

The customer is a leading multinational pharmaceutical company based in India and overseas, and is committed to providing affordable and innovative medicine for healthier lives. The customer approached Cloudbyz to provide a solution to scale its clinical trials operations.

CHALLENGES

The customer was managing clinical trials manually via paper-based and disconnected legacy point solutions which was inefficient, unproductive and lacked collaboration, causing slow time to market and additional expenses. This also prohibited the customer from undertaking global clinical trials.

SOLUTIONS

The customer chose Cloudbyz as its technology partner and proceeded with the implementation of our unified clinical trial management solutions. With this solution, the customer is able to run end-to-end clinical trials globally and achieve efficiency, collaborate seamlessly with internal and external stakeholders, and reduce the overall time to market and save costs.

BENEFITS

Cloudbyz enabled the customer with an integrated solution which offers management of the entire trials process with real-time data visibility and analytics across study planning, budgeting, start up, study management, and close out. Our CTBM solution helped in budget management with configurable rate cards and budget templates.

The customer was able to have inspection ready trial documents along with real time collaboration with study partners and a scalable clinical data management solution that meets all the essential regulatory compliance requirements. Our innovative EDC solution meets all the essential regulatory compliance requirements such as FDA- 21 CFR Part 11, GCP, GAMP5, HIPAA and EU- GDPR and enabled the customer to efficiently collect, analyze, and manage clinical data of different complexity and size.

Cloudbyz products deployed for this solution

Cloudbyz is focused on building innovative enterprise application and solution natively on the cloud to help enterprises be innovative and agile
