

Chatter Scrollbar - Setup

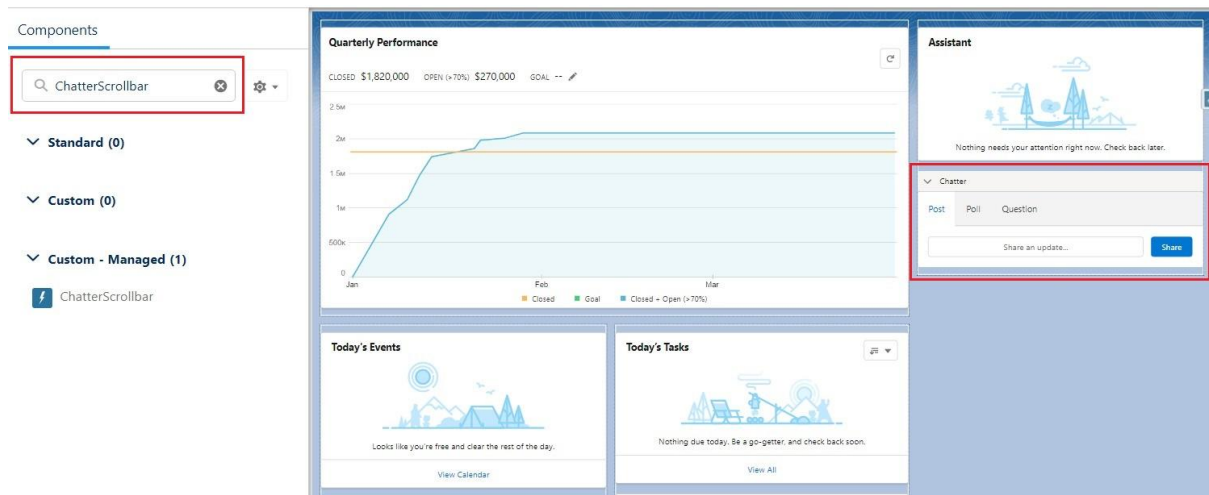

Description

Does the Chatter feed on your Lightning Record pages push other components far down the page and take up valuable screen real estate? Install the Chatter Scrollbar component to set a fixed height and enable a scrollbar within the component itself.

Installation

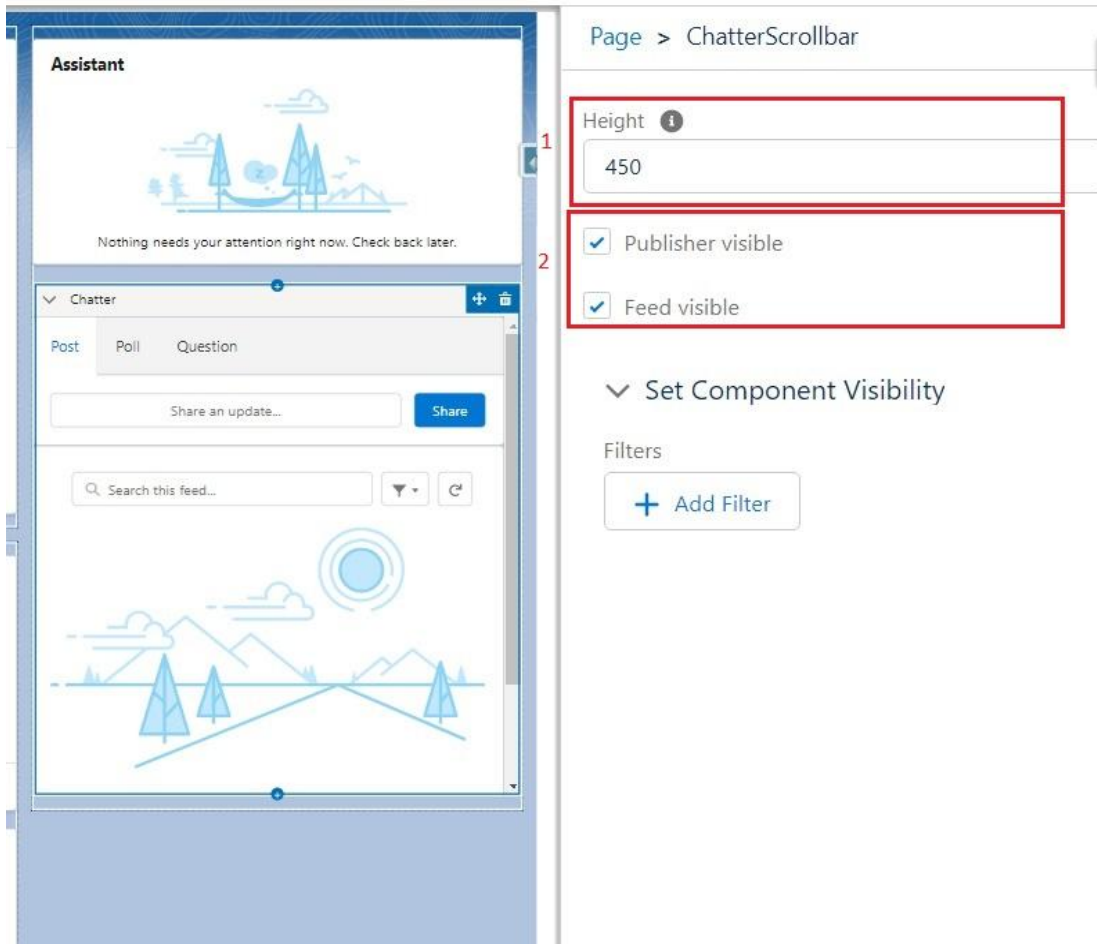

Click on “Edit Page” on the selected object or home page.

Type ChatterScrollbar in the search box and then drag and drop the Chatter Scrollbar component to the layout.

Click on the component to configure the options:

1. Change the Height to set a fixed height and enable a scrollbar within the component itself.
2. Show or hide the “Feed” and “Publisher” sections depending of the selected options.

Upgrade

1. In case “Chatter Scrollbar” is not displayed on the layout, please click on “Edit Page” for each object where “Chatter Scrollbar” is installed and click on “Save” to refresh the configuration on the layout.
