

Inventory & Asset Management for Salesforce

Manage your inventory and assets on Salesforce.

About Inventory Management

Unaric Inventory Management is the Salesforce application that helps you manage your inventory and keep track of loan and demo equipment.

Know exactly where your most valuable assets are, so you can maximize operations and minimize equipment losses.

Who is it for?

The application was built for Salesforce customers with a high number of assets or loan & demo equipment. For example, products, raw materials, IT equipment, tools and spare parts.

It makes inventory management and asset tracking easy, consolidating all information within Salesforce, making it perfect for busy customer service, sales and operations teams.

The features

Access information when you need it by housing all your inventory and asset tracking information neatly within your CRM.

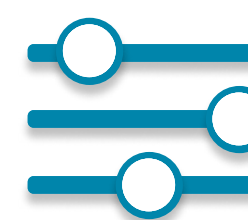

Scan in items fast using a smartphone. Items are added with GPS coordinates and a unique QR code.

Pro-actively report on due or overdue loans and view historical tracking of all assignments and locations

Easily process equipment requests, reservations and loans.

Customize your data fields with asset information like warranty dates, insurance information, maintenance records and costs.
