

Milestones PM+ notes v18.0

Performance and Usability Improvements

- New modal on Summary page has date filter, Program toggle, and two-column layout options.
- New **“Manage Project Plan Column Width”** custom setting will set the default width on the initial load; column can still be manually adjusted.
- New Time Tracking custom setting, “Default Email Template Folder,” to separate from the Milestone/Task notification email custom setting.
- Improved UI and UX of *Import Template*, *Milestones PM+ Help*, *Project Creation* tabs.
- *Calendar* tab dates will display recurring holidays.
- ‘Predecessor Task’ field will now filter tasks for the entire project (not just the related parent milestone).

Bug Fixes

- Gantt chart, Manage Project Plan, Time Entry modal visibility issues due to certain user permissions.
- Tasks not syncing when predecessor Tasks on a different Milestone is completed.
- Duplicate email template folders on Time Entry’s *Submit Time* popup.
- ‘Prevent Non-Admin Template Edits’ custom setting now works correctly.
- Manage Project Plan LWC will save all records when checking multiple records and doing a mass update.
- Gantt chart with DateTime fields in the bar hover fieldset now works.
- Other miscellaneous bug fixes.
