> This is exactly what you want it to be, a window to your SharePoint files that is accessible directly from your Salesforce records. It's seamless, intuitive, and has some really good customization options. If you're on the fence, get off the fence. If you're worried about the cost, this is the easiest sell I have ever made to management when I show them the Salesforce file storage cost per GB vs. the SharePoint file storage cost per GB. One of those rare products that fulfills all its expectations and more. Highly recommend. - **Jeff Fahndrich, Salesforce Administrator at e.Republic**
