Oktana Location Map Permissions

The Oktana Location Map includes an *oktanaLocation* component that helps to visualize and edit the Location field of the Standard Object Location. The component is designed to work on Location record page and requires “Location” field read or edit access in order to work with the component.

Configuration at profile level

The following steps describe one approach to give proper access to Location field of the Location Standard object at profile level.

- 1. Log in to the Salesforce Org
- 2. Go to “Setup”
- 3. Type “Profile” in the Quick Find box
- 4. Click on the profile that will view/edit Location using maps
- 5. In the “Standard Object Permissions” section, check record access for “Locations”. Read access is the minimum permission to view the Location field on the map.
- 6. In the “Field-Level Security” section, click on View next to Location. Click on Edit and select the Read or Edit access on “Location” field
- 7. Click on “Save” button
