

WE NOW LIVE
IN A DATA
ECONOMY

CONVAYR

Connecting data is a critical business function yet this is often constrained by:

Niche Expertise

Custom integrations require skilled developers which can be expensive to resource. This often results in a dependency on third-party consultants or manual processes, increasing project costs.

High Cost of Integration Platforms

Tools can come with steep licensing fees and consumption based pricing which is difficult to budget for and cost increases as usage grows. Lower cost tools are often lacking in flexibility.

Complex Maintenance Requirements

Regular updates to systems can break custom integrations, requiring ongoing maintenance. Skilled teams are needed to monitor integrations and manage dependencies, adding overhead costs.

Business Dependency on Individuals

System Administrators and data teams spend time on data requests from the business with exports, imports, spreadsheets and data-loaders, having to manage competing priorities and reducing overall effectiveness.

CONVAYR

System owners and administrators use CONVAYR to configure and **manage data workflows effortlessly** across different data sources and targets **without heavy technical support or high costs.**

Business users can be enabled to **run seamless, reliable data integrations** on their own, **eliminating delays, cutting costs, and freeing resources.**

CONVAYR

INTEGRATE

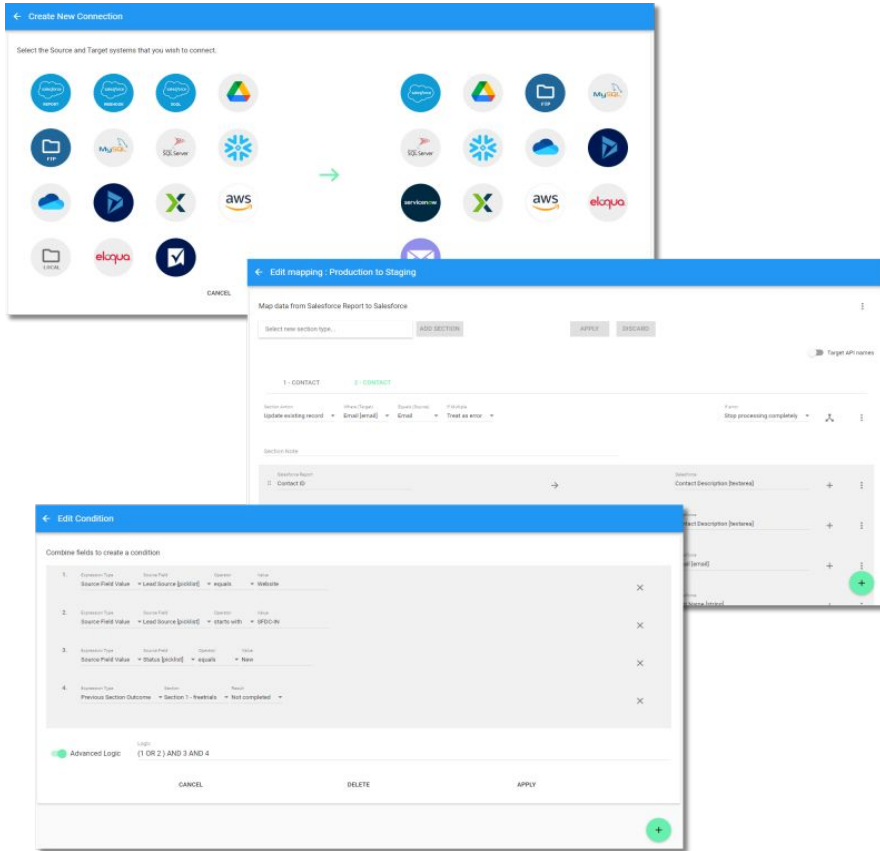

Integrate the systems within your business. Access the full target system schemas to map and transform the source data on a scheduled or ad hoc basis.

TRANSFORM

Powerful mapping capabilities allow the transformation of data, including querying the target system in the mapping to enable any transformation imaginable into the target systems.

MAINTAIN

Full cron scheduling of jobs including customisable system downtime, dependencies between connections and deployment via email to allow self-service within the business.

Great Integration tool for Admins

Nice integration tool with excellent data manipulation/transfection and even "Search before create". I have found it easy to use and very useful for a variety of data tasks big and small. It also has an innovative webhook feature that allows real-time integrations that are easy to setup for Admins.

Point to Point Integration with Point and Click. No Brainer!

I'm always a bit dubious of new apps, I've been in the Salesforce space for years and am familiar with most of what the ecosystem has to offer. Conveyor is hands down my favourite app. As an early adopter for the last few years (across 3 organisations) I'm thrilled to see its debut on the AppExchange.

Salesforce for most organisations is not an island! This app has helped me push, pull and transform data from so many different systems to the point where I often now use this instead of dataloader. My favourite use cases:

- Empowering Sales Operations to run their own data jobs within strict limitations (without ever having to see a UI)
- Keeping User data (and even hierarchies) in sync with HR Systems
- Updating Sandboxes with fresh data
- Transforming data from MS Dynamics to Salesforce (only had this once but was a total life saver)
- Keeping duplicate records in sync with each other for marketing preferences
- Scheduling complex exports / Data jobs

In short, I've used this app so much it's become a "must have" that is so easily justifiable for those time consuming jobs that drain internal resources.

This app also just gets better and better with new connections and functionality released regularly.

Can't recommend enough!!

Client-Advocating Architect, Project Manager and Process Expert with...

Having spent 30 years in the IT field and 25 years as a Salesforce Consultant, I have seen shiny tech solutions come and go. Convayr is one that I will use daily. It is a multi-purpose ETL and Data Orchestration system that will fit perfectly into consultants' toolboxes and will quickly become a standard by which other tools that follow will be measured.

I have been using CONWAYR on a daily basis for multiple clients and data orchestrations and can attest the system's abilities, speed and ease of use. One-off data loads, scheduled data-loads, scheduled data extracts and loads, and SFDC Org to Org data movements are a breeze with CONWAYR.

This one is a game changer for me. Speak to the FrogFoundry Team, schedule a demo, and I wager that CONWAYR will become a GoTo Utility for your consulting practice.

CONVAYR

Pricing

Easy to use and easy to buy, with transparent pricing.

All features are included and data volumes are unlimited.

Select how many users you need and how many connections. It's that simple.

	\$	£	€
Users*	\$100/user/month	£85/user/month	€90/user/month
Connections**	\$250/pack/month	£190/pack/month	€225/pack/month

Billed Annually

Minimum of 1 User and 1 Connection Pack

*Any named individual with access to CONAVYR

**A connection is any connection between a source and target system. Packs are of 20
