

DDT Version 2.3

Product Release Notes — June 2026

Compared to: **DDT v2.2**

WHAT'S NEW AT A GLANCE

End User Updates	Technical Updates
• Timeline View (Parent / Child / Grandchild) • Calendar View (Parent / Child / Grandchild) • Bulk Edit & Delete • Save Filters (up to 5) • Kanban View — Child & Grandchild Support • Colored Cells (Conditional Formatting) • Child & Grandchild Level Filter and Search	• Codebase enhancements & performance improvements • Bug fixes

1. End User View Updates

1.1 Timeline View

- A new Timeline view is available for any object with a configured start date and end date field.
- Timeline view covers all selected records across Parent, Child, and Grandchild levels in a single view.
- Users can switch the timeline's date range with a single click between the following views:
 - Today | Day | Week | Month | Quarter | Year

1.2 Calendar View

- A new Calendar view is available for any object that has a date field configured.
- Calendar view covers all selected records across Parent, Child, and Grandchild levels.
- Users can move and reschedule records directly from the calendar by changing their date within the view.
- Jump directly to any date instead of scrolling manually.
- Hide Parent, Child, or Grandchild records independently when they're not needed on screen.
- Scroll smoothly between months for quick navigation.

1.3 Bulk Edit & Delete

- Users can now select multiple records using checkboxes and apply bulk actions.
- Bulk Edit allows updating a selected field's value across all checked records at once.
- Bulk Delete allows removing all checked records in a single action.

1.4 Save Filter

- Users can now save data filters for quick reuse.
- Up to 5 saved filters are supported per user.

1.5 Kanban View — Child & Grandchild Record Support

- Kanban view now supports Child and Grandchild level records and fields.
- Previously, Kanban view was limited to displaying only Parent records — this restriction has been removed. *(Enhancement over v2.2)*

1.6 Colored Cells (Conditional Formatting)

- Users can now select a field, define a condition, and apply a color to matching cells.
- This makes it easy to visually highlight records based on custom rules — e.g. status, priority, or due dates — directly within the table.

1.7 Filter & Search at Child and Grandchild Levels

- Filter and search are now available at Child and Grandchild record levels.
- Previously, filter and search were limited to Parent-level records only — this restriction has been removed. *(Enhancement over v2.2)*

2. Technical Updates

2.1 Codebase Enhancements

- General codebase enhancements implemented to support the new Timeline, Calendar, and Kanban capabilities, and to improve overall performance.

2.2 Bug Fixes

- Several minor bugs identified since the v2.2 release have been resolved in this update.
