

AppCloud® API Identity Services

Enabling Developers to Secure Applications

AppCloud API Identity Services are now available for organizations with a desire to leverage the Covisint leading Cloud Identity Services in their application development processes. This service allows our customers and their channel partners to rapidly and easily deploy Identity Services APIs from within their current workflows—building, securing and authenticating their web-based and mobile applications. It eliminates your need to purchase software, hardware and other services to secure your applications on multiple devices.

Covisint provides this solution in a cloud-based solution, so there is no software to install. This service includes a developer console for developers to build and test their applications and is provided with enterprise class SLA's. Covisint has provided these services to our customers for more than twelve years in a variety of industries such as automotive, healthcare, business services, financial services and energy.

This service has been introduced to enable our customers to aggressively respond to the need for securing cross-platform applications. These API's can be utilized to authenticate applications built as traditional web based applications and mobile applications (phone and tablet), and emerging appliances such as in-vehicle applications. CIO's will use it to implement the demands from their business to expand across platforms.

Covisint AppCloud API Identity Services can be used by any organization, in any industry that has a need to develop applications that need provisioning and authentication services for its users.

AppCloud API Identity Services examples by industry:

- **Automotive** — to build and secure in-vehicle applications
- **Healthcare** — to develop secure mobile applications for physicians and to connect telehealth devices
- **Energy industry** — to create secure mobile applications for geologists working in the field exploring new oil fields
- **Financial Services** — to design secure mobile financial applications for its customers

AppCloud API Identity Services Developer Dashboard includes:

- Ready-to-use API's for our leading authentication and provisioning services, allowing your developers and third-party support to secure applications and systems
- APIs for standard website implementations and other mobile devices
- A full test environment for your developers to build and test applications as they implement our API service
- Comprehensive help documentation to answer questions
- Social tools such as forums and blogs so your developers may interact with our staff and others to help them build identity services skills and understanding
- Full analytics view and reporting so that you may better understand usage rates
- Ability to enable and support mobile and other devices

Welcome Covisint AppCloud® Developers

AppCloud® API development community support

Developers, this is for you!

Covisint AppCloud® Developers is your gateway to the AppCloud® API. Through invoking Covisint's AppCloud® API's in your web or mobile applications, you can gain access to Covisint's technology.

This site is continually evolving and we hope that you will participate with your questions, feedback, and suggestions so we can help make you successful in your application development. Please let us know how you'd like to see the Covisint AppCloud® APIs and Covisint AppCloud® Developers grow.
