

Astrea clone offers the opportunity to Clone the Same/Similar Data under any objects in Salesforce which contains common reusable information. It also allows the users to leave any field to be filled later.

The screenshot shows the Astrea Clone interface with the following sections:

- How many times do you want to clone this object?**: A text input field containing the number "99", which is circled in red.
- Override existing field values**: A table with columns "Select Fields" and "Value". The "Select Fields" column has a dropdown menu with "none" selected. There is a "Save Rule" button and a "Clone" button.
- Select child objects to clone**: A section with "Select All" and "Deselect All" buttons. Below them are three checked items: "OpportunityContactRole (2)", "OpportunityLineItem (2)", and "Quote (5)". This section is also circled in red.

## DEEP CLONING:-

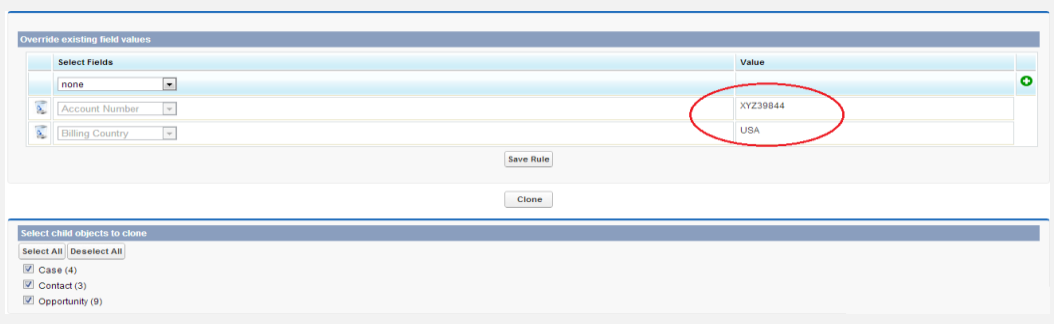

The amazing feature of *Deep Clone* allows customizing the cloning of child objects e.g. If account has to be cloned, user can decide if child (i.e. Contacts, Notes, Attachments) has to be cloned.

## MULTIPLE RECORDS:-

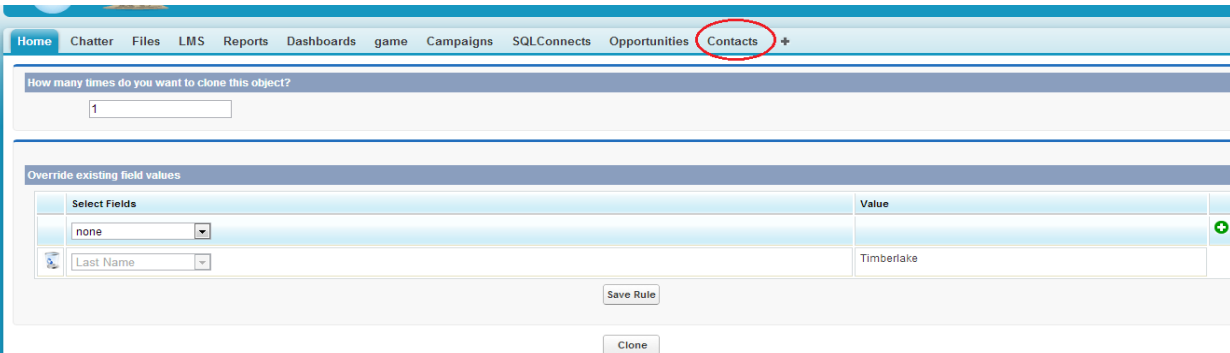

Astrea Clone allows user to create up to 99 copies of any records including the sub-records.

## OVERRIDING VALUES:-

Astrea Clone also supports overriding of field values. While cloning the records user can change the field values (if required). For instance, while cloning the account record, user can change the address info for the cloned record.

The screenshot shows the "Override existing field values" section of the Astrea Clone interface. It features a table with columns "Select Fields" and "Value". The "Select Fields" column has three dropdown menus: "none", "Account Number", and "Billing Country". The "Value" column has two rows: the first row contains "XYZ39844" and the second row contains "USA". The "XYZ39844" value is circled in red. Below the table are "Save Rule" and "Clone" buttons. At the bottom, the "Select child objects to clone" section shows three checked items: "Case (4)", "Contact (3)", and "Opportunity (9)".

## Standard Objects Cloning:-

*Astrea Clone* allows cloning of the records on any Standard Objects (Objects already existing in Salesforce, e.g. Accounts, Contacts, Leads, Cases etc) and Custom Objects (Objects defined by user to store information apart from *Salesforce Standard Object*).

## Compatibility:-

*Astrea Clone* is available on AppExchange and is fully compatible to run with:

- Group Edition
- Professional
- Enterprise
- Unlimited

### Value to Users:

The application creates high value for any organisation which needs to deal with cloning of Information and has been spending valuable time to do so.

Cloning of information also allows the administrator to create rules and involve desired departments. A particular object needs to be cloned for Marketing Department, a rule can be created, to set the default values for Marketing.

*Astrea clone* has ability for an admin to control which fields are to be copied when an object is cloned, some of the information is not meant to be same even if you are cloning i.e. Birthdays, Spouse info etc. The end user may change the rules set up by the Administrator.
