

Realize the Full Potential of Salesforce

Imagine one view of your customer data. Imagine real-time data flowing in and out of Salesforce - giving you the power of an on-demand application that can now leverage critical enterprise applications, databases and legacy systems. With XAware and Salesforce, you now have control over all of your customer data, both in-house and hosted.

XAware 5.0 enables Salesforce users to integrate non Salesforce systems at a real-time and transactional level. Salesforce users can now see all customer related data within one environment, including data from financials, ERP, and other business applications, legacy mainframes and datafeeds.

Configure NOT Code

XAware's Salesforce Integration Solution is designed to allow you to rapidly migrate, manage, share and mash-up data from various systems in a matter of days, not weeks or months.

With XAware you can now:

- Reduce latency across the customer lifecycle (campaign/lead management, order management, billing, customer support)
- Share bi-directional data with the ERP customer master
- Reduce data replication by moving only Salesforce data changes between systems
- Integrate Salesforce data into other reporting mechanisms
- Create, manage and integrate Web-services, data and application mash-ups
- Integrate your SaaS solutions with existing in-house systems (including mainframes) and other external hosted systems

Comprehensive Salesforce Integration

- Enterprise-class integration solution
- Start integrating Salesforce data in a matter of hours
- Create and manage one real-time view of customer data
- Migrate data to and from other CRM systems

Fast, Easy to Manage

- Configurable integration, even with mainframes
- Rapid deployment and delivery across all systems
- Based on industry standards
- Download for free, get started immediately
