Package Components

▼ Code (2)

Action	Component Name	Parent Object	Component Type	Installation Notes
Create	SearchRecordTest		Apex Class	This is a brand new component.
Create	SearchRecords		Apex Class	This is a brand new component.

▼ Resources (4)

Action	Component Name	Parent Object	Component Type	Installation Notes
Create	AutocompleteCSS		Static Resource	This is a brand new component.
Create	Quick Finder		Home Page Component	This is a brand new component.
Create	autocomUUS		Static Resource	This is a brand new component.
Create	autocompleteJS		Static Resource	This is a brand new component.

4. Click on Next button at API access page.

Step 1. Approve Package API Access Step 1 of 3

These settings control the access that s-controls and other components in this package have to standard objects via the API. The access will still be constrained by the user's profile. You can view and edit the package API access to standard objects after the package is installed from the package detail page. [Tell me more](#)

Package Custom Objects
This Package will have the user's access (via the API) to all Custom Objects in your Organization.

4. Now you can see “**Quick Finder**” Component on the Home page window.
You have to enter two characters to see result.

A screenshot of a web application interface. At the top is a navigation bar with tabs labeled "Home", "Chatter", "Campaigns", and "L". Below this is a "Quick Finder" section. It contains a dropdown menu with "ApexClass" selected, and a text input field with "se" entered. Below the input field is a list of search results under the heading "Name". The results are "SearchRecords" and "SearchRecordTest".
