

What is BellaDati?

BellaDati analytics and reporting cloud tool reinvents the way how business users interact with data. Follow three simple steps to explore new perspectives and build personalized insights through beautiful reports and dashboards.

Cloud or On-Premise

Select Cloud for immediate access, power and scalability of AWS or go for On-Premise to have absolute control over your BI environment.

Big Data Analytics

Mix power of Big Data with intuitive and agile BellaDati interface. Connect dozen of sources to analyze structured and unstructured data seamlessly and get the "big picture".

Super-connectivity

Connect to more than 100 databases, web services, popular social networks, SaaS solutions or local files.

Data Transformations

Use BellaDati proprietary scripting language to transform and clean imported data. Schedule imports, setup alarms and define policies to keep your data always fresh.

Powerful data warehouse

Connect your own data warehouse or use BellaDati built-in solution for data consolidation. Load, transform and store data from numerous sources to identify links and analyze trends.

Pure Browser Experience

No client side installations. No multiple studios. Access all BellaDati features solely from single browser interface and enjoy true speed of you data discoveries.

Creative Platform

Explore BellaDati API, REST API and SDK to build your own analytical applications. Use BellaDati scripting language to clean and transform or embed live views in 3rd party portals.

GEO data analysis

Measure business performance on interactive maps. Choose points or heatmaps for the best representation or define your own areas.

Sharing and Collaboration

Leverage BellaDati in-report networking features to upload attachments, add cell-level comments or chat with colleagues. Single click will share your reports with desired members or groups.

Mobile BI

Bring analytics to your fingertip. Browse online or offline reports, collaborate, share, filter or immediately harvest data into BellaDati. Piccolo for iPad, iPhone and Android is everywhere.
