

# POSTOBJECT PRO

# Product **Overview**

---

## **Automating processes for improved efficiency and reduced cost**

Copying data from your Source Object to Target Object & automatically defining default values for your Target Object was never **so Easy & Convenient!!!**

As a Salesforce administrator your entire focus is to get the processes automated with the best data quality and ease of use.

At Damco Solutions, we constantly innovate to help businesses gain more efficiency with the best automations. Therefore, we have designed & developed a Salesforce Package– PostObject Pro which does exactly what every Salesforce Administrator would love to have in his Salesforce kitty.

Empower your users to do their job easily, efficiently and quickly without writing a single line of code. With no extra configurations and automations to care about save your crucial time, resources and efforts to devote into your core business challenges..

***“PostObject Pro empowers users to create a new object record from the source object and automatically copies all the values from the source object to target object as per specified mapping without need for custom code or automation from Administrators/Developers”.***

# PostObject Pro **is Hassle Free & Seamless!**

---

## Features & Highlights:

---

### Convenient

Define the field mappings between two objects and use the mapping to auto-populate the values from source object to target object while creating the target object record.

---

### Flexible

Choose from Field Mapping as well as Value Mapping options for more flexibility. Define specific values for target object fields where needed, in case a desired field mapping doesn't exist.

---

### Easy

Forget triggers and other complicated mechanisms to auto-fill values; just 2 step easy configuration to enable automated mapping and record creation.

---

### Extensible

Define mappings for the new objects and addition of new fields to the existing objects on the go.

---

### Timesaver

Auto-matching of fields based on Field Type, Name and API Name to save mapping time.

---

### Intuitive

Intelligent mapping for pick list values to select value from the available options on the target object.

---

### User Friendly

Needs Administrator's involvement for the initial configurations only. Users can then proceed by selecting the right mapping between two objects while creating the target object records from the source object.

---

### Secure

Runs in system mode to bypass user permissions for record creation. However the same permissions will be applied when viewing the created record thus ensuring system level security.

---

# About **Damco**

---

Damco is a perfect technology partner enabling enterprises to make profound IT impact on their businesses in the constantly changing marketplace. For around two decades, we have been a steadfast company focused on the progress of our clients and developing trustworthy relationships with our customers, partners and employees.
