

Step 1

GoTo email service and create a new email service using LeadByEmailGenrator class

Email Service

Email services let you use Apex classes to process the contents, headers, and attachments of inbound email. Use the settings below to create an email service. After saving, create one or more email service addresses to receive messages for processing.

SaveSave and New Email AddressCancel

Email Service Information

Email Service Name

LeadByEmail

Apex Class

LeadByEmailGenrator

Accept Attachments

None

Advanced Email Security Settings

☐

Accept Email From

Convert Text Attachments to Binary Attachments

☐

Active

☐

Failure Response Settings

Configure how salesforce.com responds when an attempt to access this email service fails for the reasons shown below.

Over Email Rate Limit Action

Discard message

Deactivated Email Address Action

Discard message

Deactivated Email Service Action

Discard message

Unauthenticated Sender Action

Discard message

Unauthorized Sender Action

Discard message

Enable Error Routing

☐

Route Error Emails to This Email Address

SaveSave and New Email AddressCancel

Then Click “Save and New EmailAddress”.

Step 2. And create Email Service Address

Email Service Address

Specify an email address for this email service. The email service processes messages sent to this address. One email service can have multiple email addresses.

Email Service Information

Email Service Name	LeadByEmail
Accept Email From	All email addresses (subject to security settings)

Email Address Information ! = Required Information

Email address !
Specify the local-part of the email address. Salesforce.com assigns the domain name part of the address.

Active ☒

Context User ! 

Accept Email From 

Step 3. Activate Email Services

Email Service: LeadByEmail

Email Service Name	LeadByEmail
Apex Class	LeadByEmailGenrator
Accept Attachments	None

After Activated Email scroll down below and collect Salesforce email address

Email Addresses			New Email Address
Action	Email Address	Context User	
View Edit	leadbyemail@2pdg6fowt1d77105qpxnt7dqxyhus1yigw7ux82k83e3xixzz1.28-1fwjmeag.ap2.apex.salesforce.com	Rahul Godara	

Step4. Setup an auto-forward rule on sales inbox of your company to copy the email address.
