

# EXAM ADDRESS VALIDATOR

Tired of invalid addresses in your Salesforce App? Struggling with users creating duplicate records all because they inputted the address a little differently? ExAM Address Validator is here to help.

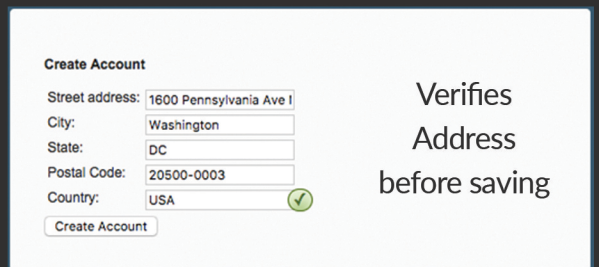

The ExAM Address Validator let's users easily validate the addresses of any object against the United States Postal Service central repository. Utilizing a seamless integration between ExAM, the USPS and Smarty Streets, users are able to type, find and validate addresses in real time without skipping a beat!

Missing out on valuable data like a clients billing or shipping address can lead to a substantial loss of customers, let ExAM Address Validator help make human errors a thing of the past.

Real-time address validation for any Salesforce Object

- ✓ Predictive text while typing.
- ✓ Formats street/apt names before ever saving the address!
- ✓ Adds missing data, great for those tricky zip codes!
- ✓ Warns user if address does not match USPS address.

Ability to use addresses even if incorrect:

Auto-populates missing information and formats street (Avenue to Ave.)
