

Control your business on the go with Financials mobile apps

Sage mobile apps boost the productivity of your workforce and allow you to easily and efficiently collaborate with your teams on the go.

Financials mobile app

For Apple devices, the Financials mobile app is built natively on iOS in partnership with Apple. Meaning your user experience is just as intuitive as the Apple iOS.

Stay up-to-date on business performance by accessing company dashboards from your mobile device. Collaborate with your team on a customer transaction or report using Salesforce Chatter®.

Reduce time spent chasing customer receivables by enabling mobile employees to create or alter invoices while they're on-site with a customer and accept payment before they leave. Your teams can see stock levels so they know which products are in inventory to sell or immediately let customers know if an item is out of stock. Employees can quickly review and add customer and vendor account details such as contact information, and even locate addresses so they can plan their route to a customer site.

Give employees time back by enabling them to enter expenses and submit expense reports from their mobile device. Employees no longer have to endure the pain of keeping up with physical receipts. With the Financials mobile app they can take pictures of their receipts and easily add them to expense reports. Managers can approve or question expense reports from the mobile app as well. All making your team more efficient wherever they are.

Financials web app on Salesforce1®

The Financials web app is accessible via the Salesforce1 mobile app, available on iOS, Android and Windows operating systems. By accessing Sage Financials via the Salesforce1 mobile app, you have access to the features of Sage Financials that you have access to on the Sage Financials web app.
