Astrea Unit Converter User Manual

- **Component Overview**

Astrea Unit Converter is a Salesforce native Lightning component. The component is used to convert the unit within a Salesforce instance. The component supports point and click graphical user interface which is very simple and easy to use.

Note: A custom domain name in Salesforce Org is required for a Lightning component to work successfully.

- **Steps For Installation**

- Install Unit Converter Package. Select Install for All Users and then click on **Install** button.

- Steps to add the Component :

1.It can be Added on the Home Page by following steps:

a. Go to App icon in lightning and select the sales app.

b.Go to **Gear Icon > Edit page**.

c. A screen will be open in which you can add your component by dragging it from the custom and dropping it on the page where you want.

d. Click on the **Save** button.

You will see the unit converter on your home page.

Note: Similarly you can access this component from any Record's detail page, as a tab or in community as well.

Unit Converter can be used in mobiles also.

Include your components in the navigation menu by following steps:

- 1.Create a custom Lightning component tab for the component.From Setup, enter tabs in the Quick find box and select **Tabs**.
- 2.Add your lightning component to the salesforce app navigation menu.
 - a.From setup, enter navigation in the Quick find box, then select **Salesforce Navigation**
 - b.Select the custom tab you just created and Click **Add**.
 - c.Sort the items by selecting them and clicking Up or Down.
3. Check your output by going to salesforce mobile web.

Working of Unit Converter

- 1.**Unit Type:** Select the unit type you want to convert. For eg: Speed, temperature, Area, Flow Rate, Time,Distance etc.
- 2.**From:** Specify the Base units you want to convert.For eg (in case of speed you want to change from km/hr. Then select km/hr).

3.**To:**Specify the unit in which the above selected unit should be converted.For eg (km/hr converts to m/s.Then select m/s).

4.**Enter Number:** Enter the number you want to convert.For eg:(you want to convert 2 km/hr to m/s.Then you will enter 2 in the Column).

The image shows a web-based unit converter titled "Astrea Unit Converter". It has four input fields: "Unit Type" set to "Speed", "From" set to "Kilometer/Hour", "To" set to "Meter/Second", and "Enter Number" set to "78". Below these fields, the conversion result is displayed: "21.666666666666664 (78 Kilometer/Hour = 21.666666666666664 Meter/Second)".

Unit Type	From	To	Enter Number	Result
Speed	Kilometer/Hour	Meter/Second	78	21.666666666666664 (78 Kilometer/Hour = 21.666666666666664 Meter/Second)
