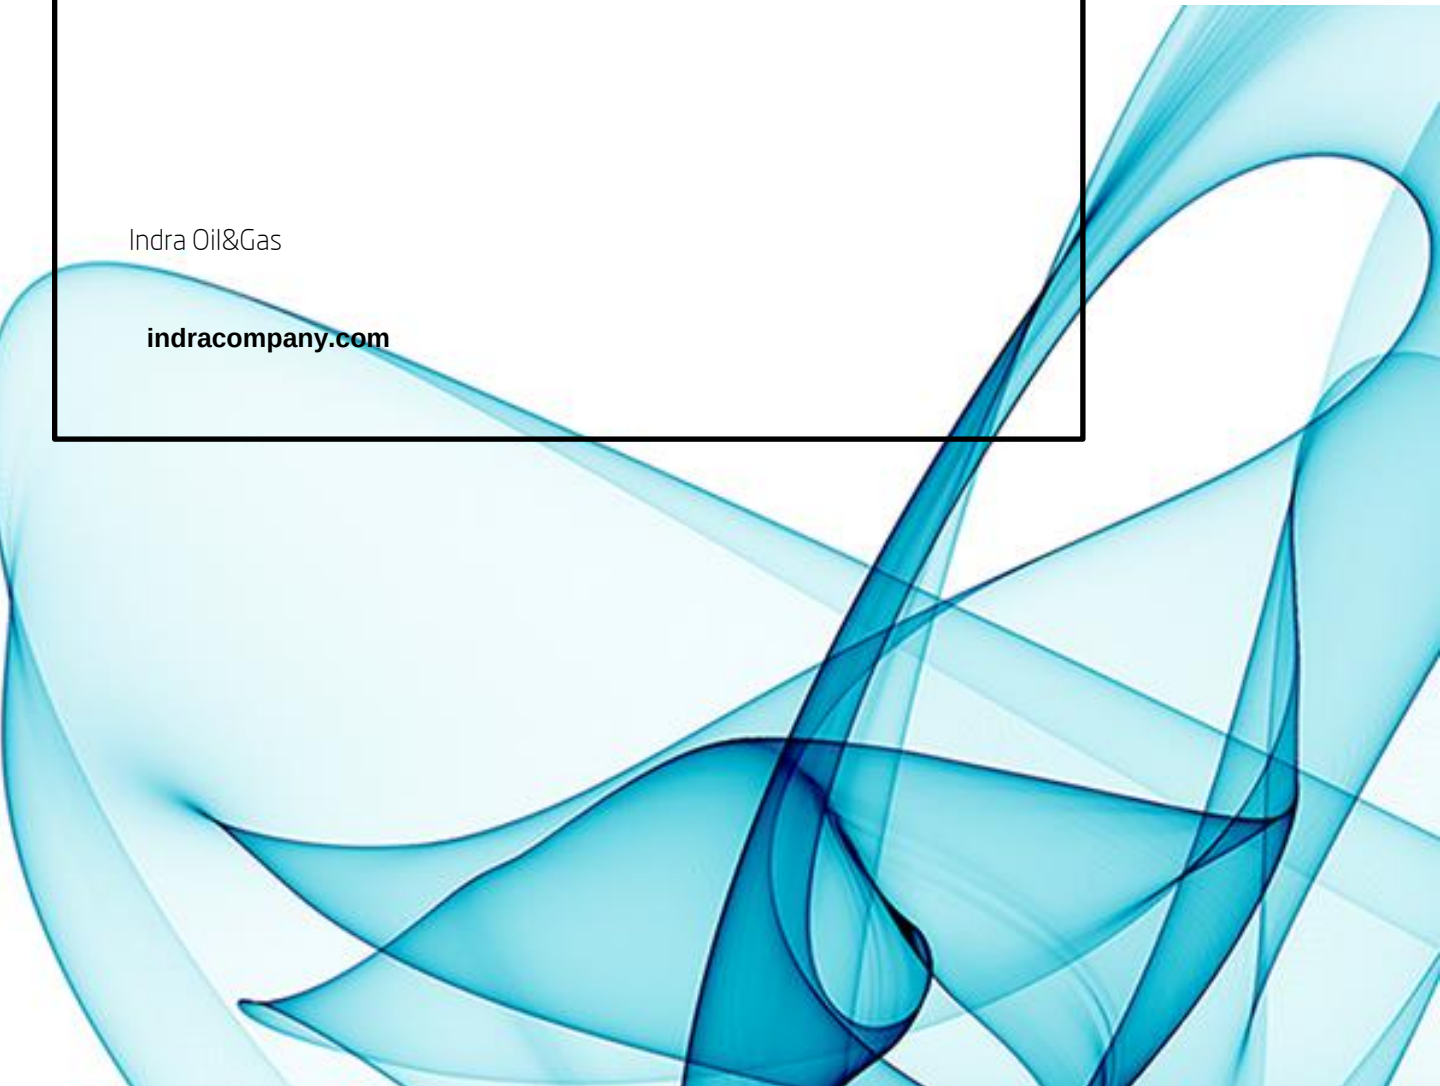
Hydrocarbon Contract Management

Indra Oil&Gas

indracompany.com



Indra Hydrocarbon Contract Management (HCM) is a key tool to cover the gap in the management of not operated production data by National Hydrocarbon Agencies

The challenge

In the current context, National Hydrocarbon Agencies have several main objectives:

- **To promote and mananage** Exploration and Production contracts and agreements.
- To design, evaluate and **promote investment in Exploration and Production activities**, according to best international practices.
- Adquate management and commercialization of royalties.
- To identify and evaluate the **hydrocarbon potential** of the country.

For this, they need to implement agile technological tolos that allow them to manage information to optimize technical and administrative procedures, as well as large investment in technological infrastucture.

The solution

Indra's Oil & Gas unit with its extensive experience in the integral management of production, based on the **leading digital solutions manufacturer Salesforce** platform, has developed a flexible and adaptable **In Cloud** solution to manage contractual structures with operators.

Given the needs of companies within the digital field of hydrocarbon production, **Indra has developed** a product with the **"As a Service" modality (end-to-end)** with a **common repository** for data consolidation, **traceable adn based on the PPDM™ design**, which allows managing production data in a **comprehensive manner focused on the business CORE**.

Information is obtained through files of different nature and format, in such a way that the consolidation of information is carried out in a simple manner.

It is hosted on the Salesforce cloud platform with access to many standard features. In a few minutes, production is available in a single repository to be reported and accessible at all times through mobile devices.

Modules & Workflow
