CONNECT SALESFORCE TO REAL-TIME HOTEL DATA

Accelerate Innovation with Hapi's Hospitality Integration Platform and Salesforce

It's difficult to do Data-Driven Marketing, without Real-Time Streaming Data.

In an omnichannel digital world, engaging with customers at the right time is crucial. Hotel companies are relying on real-time data from their Property Management systems in order to capture a full and current view of the Customer's journey. Hapi enables that.

Custom Integrations are expensive and can be difficult to maintain over time.

Spending 50k to 100k on a custom integration is costly and eventually, it breaks down and becomes impossible to support and maintain. Hapi-Connect is a fully supported productized integration that includes on-going maintenance, upgrades, and support.

Control over your Data has never been more important.

Hapi's platform is designed to give control of customer data into the hands of the hotel, the data owner. GDPR is an important journey for the hospitality industry, Hapi's platform enables filtering and enrichment services while data travels across our streaming platform.

Understanding how PMS data fits into Salesforce requires experience.

The Hapi team is trenched with experience in three unique areas: Hospitality, Salesforce, and Property Management Systems. Our team has over 100+ years of combined experience in these areas.
