

Setup.

Install CauZali from AppExchange only for Administrator.

If you want non-administrators to work with CauZali as a model designer assign them to the Cauzali Editor permission set.

As Administrator, you have access to a Demo tab in CauZali where you can install some Demos to get inspired.

You need to have set "My domain" on your org. to use Cauzali.

When an end-user use a CauZali model we respect all security settings and required field etc. This is said because, it is the reason for most problems when a CauZali editor has made a model. It's typical you as an administrator who can help to solve this problem. You can set a log on a given CauZali model to find the problem.
