

signNow

signNow: e-signatures
are just the beginning

E-signature that scales with your workflows

signNow offers an award-winning e-signature solution that is used by millions of people worldwide to edit, sign and send documents for e-signature on any device, desktop or mobile. Based on G2 survey data, signNow is rated higher than its competition in key categories such as **Secure Authentication, Workflow Setup, Regulatory Compliance, Performance & Reliability.**

I use signNow for every job position that I recruit for. As soon as I get a new job order I prepare a job description and my next step is to set up my template group in signNow for potential candidates to fill out and sign. Each group will contain a qualifications form, a right to represent form, and a rate worksheet. This process used to take me an hour but thanks to signNow, it only takes 5 minutes to prepare!

- G Suite
- Dropbox
- Autodesk
- Slack
- Microsoft

signNow empowers you to simplify the signing and management of documents online, make your teams more productive, and easily integrate into the apps you use and love. signNow is an e-signature solution that scales with your workflows.

Key benefits of signNow workflows

Work uninterrupted

signNow's desktop solution is instantly synced with the mobile app. That means users can start editing documents in their office and finish from their mobile device, even while offline. All data is securely stored in a private cloud and is instantly synced with the signNow network as soon as connection is restored.

Approve documents on any device, in seconds

Empower users to create their legally-binding e-signature once, and instantly use it any time they need to sign a document in the future. They can draw or type their signature, or upload an image using a mobile device or desktop computer.

Simplify complex workflows

Users can arrange a document signing order for as many signers as they need in just a few steps. They can also enable/disable document forwarding, preset reminders, and set expiration dates and passwords for confidential documents.

Facilitate e-signing on the client's side

Automated guidance makes e-signing easy even for inexperienced users. For example, you can label fields with short instructions for extra clarity. If you preset fields as required, rest assured none of the fields can be skipped by signers.

I highly recommend signNow for all businesses that deal with clients who have little time to come to the office and physically sign documents - and also for the clients who want to expedite processing of all documents that require signatures.
