Key Focus

MULTI-CLOUD

Extensive expertise in consulting, designing and implementing complex multi-cloud projects involving the connection of Salesforce Commerce, Sales, Service, Community and Marketing Clouds, and Heroku with OMS, POS, loyalty programs and more. We are highly specialized and have demonstrated experience in the rollout of multi-cloud projects that help brands achieve connected commerce.

UNIFIED COMMERCE

Developed OSF UnifyCOMMERCE (Patent Pending), a product built natively on Salesforce that provides a 360° view of all consumer data. Our connector empowers brands to unify the shopping journey across multiple channels and touchpoints, and provide exceptional customer service thanks to the integration of Commerce with Sales/Service or Marketing Clouds. The Single-Sign-On between Commerce and Community seamlessly extends the buying experience and enables personalization as well as in-context commerce through unique Lightning Bolt components.

CUSTOM PROJECTS

Skilled in the development of tailor-made solutions. Our extensive experience in working with Force.com, APEX, VisualForce, and in building Lightning components and API integrations ensure we're able to deliver customized projects successfully.
